Introduction
The Service Manual is intended for technical personnel who maintain and repair power wheelchairs. It is important that anyone who performs maintenance and repairs described in this manual reads and understands the content of this manual so that the work is performed professionally. Always state the chassis number when contacting Permobil to ensure that the correct information is provided.

Technical Support
In the event of technical problems, you should contact your dealer, or Permobil Inc. USA at 800-736-0925.

Spare parts
Spare parts must be ordered through your dealer.

Warranties
Contact your dealer or Permobil Inc. USA for information about the warranties for this chair.

Maintenance
See the information in the Owner’s Manual.
Serial Number labels

Chassis

Chassis ID number.

R-net Power Module

R-net Power Module ID number.

R-net control panel

R-net Control panel ID number.
Covers

Removing the front chassis cover
1. Move/fold the leg rests out.
2. Switch off the main power switch on the control panel.
3. Remove the two knobs that hold the cover in place (see fig.).
4. Lift the lower edge of the cover upwards/forwards. Note that the cover is mounted partially inside the chassis at the lower edge.

Assembly
Assemble in the reverse order.
1. Fit the cover partially inside the chassis at the lower edge (see fig.).
2. Fit the two knobs that hold the cover in place (see fig.).

Removing the rear chassis cover
1. Switch off the main power switch on the control panel.
2. If the upper chassis cover isn’t removed, remove it’s rear knobs and lift it’s rear end to release the rear chassis cover, raise the seat if needed. Remove the rear chassis cover by lifting it upwards/backwards.
3. On wheelchairs equipped with lights, disconnect the rear lights cabling (see fig. below.).

Assembly
Assemble in the reverse order.
1. On wheelchairs equipped with lights, reconnect the rear lights cabling (see fig.).
2. Fit the cover partially inside the chassis at the lower edge (see fig. above).
3. Make sure the upper cover holds the rear cover and Remount the two knobs (see fig. above).

Rear lights cabling connections.
Covers

Removing the upper chassis cover

The cover is fitted with four knobs (see fig.).

1. Move/fold the leg rests out and, if necessary, raise the seat.
2. Switch off the main power switch on the control panel.
3. If fitted, remove the front chassis cover. See page 7.
4. Remove the two remaining knobs holding the cover. (see fig.).
5. Remove the cover by pulling/lifting it backwards.

The upper cover is fitted with four knobs.
Covers

Fitting the upper chassis cover
1. Move/fold the leg rests out and, if necessary, raise the seat.
2. Switch off the main power switch on the control panel.
3. Fit the rear chassis cover before the two rear knobs on the upper chassis cover is fitted (see fig.).
4. Fit the front chassis cover before the two front knobs on the upper chassis cover is fitted (see fig.).
Covers

**Removing the front link arm covers.**
Both sides of the link arms have covers fitted. The covers are fitted with four screws.

1. Switch off the main power switch on the control panel.
2. Remove the drive wheel on the side in question (see page 16).
3. Remove the four screws holding the covers (see fig.).

**Assembly**
Assemble in the reverse order.

1. Fit the covers using the four screws (see fig.).
2. Fit the drive wheel on the side in question (see page 16).

For this task the following tools are necessary:

1. Torx key TX20.

Front link arm covers.

Front link arm covers.
Covers

Removing the rear link arm covers.
Both sides of the link arms have covers fitted. The covers are fitted with four screws.
1. Switch off the main power switch on the control panel.
2. Remove the chassis rear cover. See page 7.
3. Remove the four screws holding the covers (see fig.).

Assembly
Assemble in the reverse order.
1. Fit the covers using the four screws (see fig.).
2. Fit the chassis rear cover. See page 7.

For this task the following tools are necessary:
1. Torx key TX20.
Covers

Removing the drive motor covers

The drive motor covers are fitted with two screws each. The associated brake release covers are fitted with one screw each.

1. On wheelchairs equipped with lights and indicators, remove the front and upper chassis cover. (See page 7-9).
2. Remove the drive motor cover, it is attached with two screws (see fig.).

3. Remove the brake release cover, it is attached with one screw (see fig.).

4. On wheelchairs equipped with lights and indicators, separate the indicators’ cabling at the contact on the cabling. This is positioned on the inside of the chassis, next to the seat lift.

For this task the following tools are necessary:
1 Allen key 3 mm.
1 Allen key 2.5 mm.

The drive motor cover is fitted with two screws.

The brake release cover is fitted with one screw.

The connector on the front indicator cabling.
Covers

Fitting the drive motor covers

1. On wheelchairs equipped with lights and indicators, connect the indicators cabling at the contact on the cabling. This is positioned on the inside of the chassis, next to the seat lift.

2. Install the brake release cover using the screw (see fig.).

3. Replace the Drive motor cover with the two screws as per diagram.

4. On wheelchairs equipped with lights and indicators, Remount the front and upper chassis cover. (See page 8-9).

For this task the following tools are necessary:

1. Allen key 3 mm.
1. Allen key 2,5 mm.

The connector on the front indicator cabling.

The brake release cover is fitted with one screw.

The drive motor cover is fitted with two screws.
Battery replacement

1. Place the wheelchair on a level surface.
2. Run/fold out the leg rest and raise the seat lift.
3. Turn off the main power switch on the control panel.
4. Put the circuit breaker in the "OFF" position (see fig.).
5. Remove the chassis covers. See pages 7-8.
6. Remove the electronics. See page 38.
7. Remove the front and rear seat support. See page 32.
8. Loosen the battery terminals on the front and rear battery. See figures below. Also see the sticker on the inside of the chassis front cover.

For this task the following tools are necessary:
1 Wrench 10 mm.

Observe care in the use of metallic objects when working with batteries. A short-circuit can easily cause an explosion. Always use protective gloves and protective eye-glasses.
The batteries are heavy and must be handled with care.
Used or broken drive batteries should be taken care of in an environmentally correct manner in accordance with locally applicable recycling directions.

⚠️ WARNING!

Rear battery connections.
Battery replacement

10. Lift/pull the batteries out using the battery straps.
11. Lift/push the new batteries in to the chassis using the battery straps.
12. Connect the battery terminals on the new batteries. Also see the sticker on the inside of the chassis front cover.

⚠️ WARNING!

Observe care in the use of metallic objects when working with batteries. A short-circuit can easily cause an explosion. Always use protective gloves and protective eye-glasses.

The batteries are heavy and must be handled with care.

Used or broken drive batteries should be taken care of in an environmentally correct manner in accordance with locally applicable recycling directions.

13. Remount the front and rear seat support. See page 33.
15. Remount the chassis covers. See pages 7-9.
16. Put the circuit breaker in the “ON” position.

Front battery connections.
Drive wheels

Removal
1. Switch off the main power switch on the control panel.
2. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.
3. Remove the hub cap by pulling it straight out. If necessary, carefully lever it out using a screwdriver in the slot on the cap.
4. Remove the four screws that hold the wheel in place.

5. Remove the wheel by pulling it straight out.

Assembly
Assemble in the reverse order.
1. Fit the wheel with the four screws (2). Tighten the four screws using a torque wrench. **Tightening torque 17.7 ft-lbs (24Nm)**
2. Align the hubcap on the rim and fit it by pushing it straight in.

For this task the following tools are necessary:
1 Allen key 6 mm.

**WARNING!**
The central screw must not be removed.

Fitting/removing the Drive wheels.
Drive wheels

Taking the rim apart

The rim can be taken apart to make it possible to fit/remove solid or pneumatic tires.

1. Remove the wheel in question from the wheelchair. See the previous page.
2. If the tire is pneumatic, release the air.

⚠️ WARNING!

Ensure that pneumatic tires are not pressurized before the rim is taken apart, otherwise there is a risk of personal injury.

3. Remove the six screws holding the two halves of the rim together (see illustration).
4. Take the rim apart.

Assembly

Assemble in the reverse order.

1. Fit the two rim halves (1&4) together with tire (3) and if pneumatic tire is used, it’s inner tube (2).
   Tighten the six screws using a torque wrench.
   **Tightening torque: 16.2 ft-lbs (22Nm)**
2. On wheels with pneumatic tires, fill the tire to recommended tire pressure, 29 psi (200 kPa).
3. Fit the wheel on to the wheelchair. See previous page.

⚠️ WARNING!

The recommended tire pressure for pneumatic tires is 29 psi (200 kPa). Overfilling entails a risk of explosion.
Incorrect tire pressure may result in lower stability and maneuverability. Check regularly that the tires have the correct pressure.

---

**For this task the following tools are necessary:**

1. Allen key 6 mm.

*Fitting a tire to a split rim.*
Casters

Removal
1. Switch off the main power switch on the control panel.
2. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.
3. Remove the hub cap (4) (see fig. below).
4. Remove the screw (3) and washer (2) (see fig. below).
5. Remove the wheel (1) by pulling it off the axle (see fig. below).

Assembly
Assemble in the reverse order.
1. Check that the axle and rim are not damaged. If necessary, clean to remove dirt and rust. Replace damaged parts.
2. Fit the wheel on the axle using just your hands. Check that the wheel is fully located on the axle.
3. Fit the washer (2) on to the screw (3).
4. Fit the screw (3) and washer (2) on to the axle. Tighten the screw with a torque wrench. 
   **Tightening torque: 24 ft-lbs (33Nm)**
5. Fit the hubcap (4).

⚠️ **CAUTION!**
The screw must only be used once. Once removed, the screw must therefore never be remounted. Do not use an impact wrench for the tightening torque.

⚠️ **WARNING!**
No type of screw and washer other than those stated here may be used.

Attaching/removing the casters.
Casters

Taking the rim apart
The rim can be taken apart to make it possible to fit/remove solid tires.

1. Remove the wheel in question from the wheelchair. See the previous page.
2. Remove the three screws holding the two halves of the rim together (see illustration).
3. Take the rim apart.

Assembly
Assemble in the reverse order.

1. Fit the two rim halves (2&4) together with tire (3).
2. Tighten the three screws using a torque wrench. **Tightening torque: 7.2 ft-lbs (9.8Nm)**
3. Fit the wheel on to the wheelchair. See previous page.

For this task the following tools are necessary:
1. Allen key 5 mm.

Fitting a tire on the split rim.
**Shock absorbers**

**Removal**
1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

2. Switch off the main power switch on the control panel.

3. Remove the chassis covers. See page 7-8.

4. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.

6. Remove the shock absorber, it’s fitted with two screws (see fig. below).

**Assembly**

Assemble in the reverse order.

1. Lubricate the bearing points of the shock absorber with grease before fitting.

2. Fit the shock absorber using the two screws and washers (see fig. below).

3. Adjust the shock absorber spring force. See page 21.

4. Remount the chassis covers. See page 7-9.

*Fitting/removing the Shock absorber.*

For this task the following tools are necessary:

1. Allen key 6 mm.
Shock absorbers

Adjusting shock absorber spring force
The spring force of the shock absorber must be adjusted to the correct value.

The spring force can be adjusted to suit different body weights by means of the adjusting nut. To get the best comfort and performance the shock absorber should be adjusted according to the table below.

<table>
<thead>
<tr>
<th>Setting</th>

</tbody>
</table>

Shock absorber adjusted to setting "D".

Adjusting nut
Link arms

Removal of rear link arms
1. Switch off the main power switch on the control panel.
2. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.
3. Remove the drive wheel. See page 16.
4. Remove the lower shock absorber bracket (4) (see fig.).
5. Remove the reinforcementbar (1), it’s fitted with two screws (see fig. below).
6. Remove the link arm (2).
For removal of wheel forks and wheels, see the respective chapters.

Assembly of rear link arms
Assemble in the reverse order.
1. Check that the axle and link arm are not damaged. If necessary, clean to remove dirt and rust. Replaced damaged parts.
2. Fit the link arm on the axle using just your hands. Check that the guide (3) of the rear link arm is correct positioned in the groove of the front link arm and that the link arm is fully located on the axle (see fig. below).
3. Remount the reinforcementbar (1), it’s fitted with two screws (see fig. below). Tighten the screw with a torque wrench.
   **Tightening torque: 17.7 ft-lbs (24Nm)**
4. Fit the lower shock absorber bracket (4) (see fig.).
5. Fit the drive wheel. See page 16.

Fitting/removing the Rear Link Arm.
Link arms

Removal of front link arms

1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

2. Switch off the main power switch on the control panel.

3. If the wheelchair is equipped with lights, disconnect the front light in question. See page 42.

4. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.

5. Remove the drive wheel. See page 16.

6. Remove the rear link arm. See previous page.

7. Remove the front link arm by pulling it straight out from its axle. See fig. below.

For removal of wheel forks and wheels, see the respective chapters.

Assembly of front link arms

Assemble in the reverse order.

1. Check that the axle and link arm are not damaged. If necessary, clean to remove dirt and rust. Replaced damaged parts.

2. Fit the link arm on the axle using just your hands. Check that the link arm is fully located on the axle (see fig. below).

3. Fit the rear link arm. See previous page.

4. Fit the drive wheel. See page 16.

5. If the wheelchair is equipped with lights, connect the front light in question. See page 42.

For this task the following tools are necessary:

<table>

Fitting/removing the Front Link Arm.
Wheel forks

Removal
1. Switch off the main power switch on the control panel.
2. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.
3. Remove the wheel. See page 18.
4. Remove the cover (1) on top of the link arm.
5. Remove the wheelfork, it’s fitted with the screw (2) and washer (3) from above (see fig.). Also remove the friction brake (4) by pulling it straight out of the bearing house of the link arm.

Assembly
Assemble in the reverse order.
1. Check that the wheel fork and link arm with bearings and friction brake are not damaged. If necessary, clean to remove dirt and rust. Replaced damaged parts.
2. Fit the wheel fork on the linkarm using just your hands. Check that the wheel fork is fully located on the linkarm.
3. If needed, clean the friction brake and then lubricate it with Friction brake grease, order no: 1820405 before fitting it in the bearing house of the link arm, see page. 25.
4. Fit the screw (2) and washer (3) from above (see fig.). Tighten the screw with a torque wrench. **Tightening torque: 17.7 ft-lbs (24Nm)**

⚠️ CAUTION!
Do not use an impact wrench for the tightening torque.

5. Fit the cover (1) on the link arm (see fig.).
6. Fit the wheel. See page 18.

For this task the following tools are necessary:
1. Allen key 6 mm.

Friction brakes
The casters are equipped with friction brakes working as anti flutter devices.

Removal
1. Switch off the main power switch on the control panel.
2. Remove the cover (1) on the link arm (see fig.).
3. Remove the friction brake (4), it is fitted with the screw (2) and washer (3) from above (see fig.).
4. Remove the two o-rings from the friction brake.

Assembly
Assemble in the reverse order.
1. If needed, clean the friction brake parts. Lubricate the parts with Friction brake grease, order no: 1820405 before fitting them together.
2. If needed, clean the link arm bearing house before the friction brake is fitted.
3. Fit the friction brake (4) with the screw (2) and washer (3) (see fig.). Tighten the screw with a torque wrench. **Tightening torque: 17.7 ft-lbs (24Nm)**
4. Fit the cover(1) on top of the link arm (see fig.).

⚠️ CAUTION!
Do not use an Impact Wrench to tighten
## Drive motors

### Removal
1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

2. Switch off the main power switch on the control panel.

3. Remove the chassis covers. See page 7-8.

4. Lift up and chock up the wheelchair chassis so that the wheel in question is free of the ground.

5. Remove the drive wheel. See page 16.

6. Separate the magnetic brake and drive motor cabling at the contacts on the cabling. These are positioned on the inside of the chassis, next to the seat lift. (see fig.). The contacts are mounted together in a holder.

7. Run the connection cables out through the chassis cable duct.

8. Remove the drive motor, it’s fitted with four screws (see fig.).

---

### For this task the following tools are necessary:

1. Allen key 5 mm.
2. Allen key 6 mm.

---

### Item | Description
--- | ---
1 | Screw ISO 4762 M6x60 8.8 Fe/Zn
2 | Washer, ISO 7089 6 200 HV Fe/Zn 5 C1(6,4x12x1,6)

---

Fitting/removing the Drive motor.
Drive motors

Assembly

Assemble in the reverse order.

1. Fit the drive motor with the four screws and washers (see fig. below).

2. Run the connection cables in through the chassis cable duct.

3. Connect the magnetic brake and drive motor cabling at the contacts on the cabling. These are positioned on the inside of the chassis, next to the seat lift/seat tube (see fig.). Fit the contacts together in their holder.

4. Fit the drive wheel. See page 18.

5. Fit the chassis covers. See page 8-9.

⚠️ CAUTION!

Check the function of the brake release after fitting. When the brakes are released, it should not be possible to drive the wheelchair.

For this task the following tools are necessary:

1. Allen key 5 mm.
2. Allen key 6 mm.

The contacts are mounted together in a holder.

---

Item | Description
---|---
1 | Screw ISO 4762 M6x60 8.8 Fe/Zn
2 | Washer, ISO 7089 6 200 HV Fe/Zn 5 C1(6,4x12x1,6)

---

Fitting/removing the Drive motor.
Magnetic brakes

The wheelchair is equipped with a magnetic brake on the left and right drive motor. The magnetic brakes are both equipped with a brake release lever which is used to manually release the brakes.

Removal of magnetic brake.
1. Switch off the main power switch on the control panel.
2. Remove the upper chassis cover. See page 7-8.
3. Remove the drive motor cover. See page 12.
4. Separate the magnetic brake cabling at the contacts on the cabling. This is positioned on the inside of the chassis, next to the seat lift. The contact is mounted together with the drive motor contact in a holder.
5. Run the connection cable out through the chassis cable duct.
6. Remove the magnetic brake, it’s fitted with three screws (see fig.).

Assembly
Assemble in the reverse order.
1. Fit the magnetic brake with the brake release lever pointing upwards using the three screws (see fig.).
2. The brake release lever has an end position screw which is mounted in different positions depending on if the magnetic brake is mounted on the chassis right or left drive motor. On delivery of a new brake release, the end position screw is mounted on the end of the brake release lever. Fit the end position screw to the side of the brake release lever that points against the center of the chassis (see fig. below).
3. Connect the magnetic brake cable at the connector. This is positioned on the inside of the chassis, next to the seat lift. Fit the contact together with the drive motor contact in a holder.
4. Fit the drive motor cover. See page 13.
5. Fit the chassis cover. See page 7-9.

For this task the following tools are necessary:
1. Allen key 3 mm.
1. Allen key 2,5 mm.

CAUTION!

Check the function of the brake release after fitting. When the brakes are released, it should not be possible to drive the wheelchair.
Electric Seat lift/ Fixed Seat Tube

Manual operation
If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually.
1. Switch off the main power switch on the control panel.
2. Remove the cushion from the seat by lifting it straight up.
3. Remove the seat plate.

4. Raise/lower the seat using the seat lift crank supplied.

⚠️ WARNING!
Drills must not be used in connection with manual operation of the seat lift. There is a risk of damage to materials.
On wheelchair equipped with a fixed seat tube, the seat must always be positioned in its lowest position when the wheelchair is used. The lowest position can be adjusted using spacers on the seat supports, see page 38.

For this task the following tools are necessary:
1. Allen key 4 mm.
1. Seat Lift Crank

The seat plates on Corpus 3G are held in place by two screws at the back edge and two quick-mount clamps at the front.

Manual raising/lowering of the Corpus seat using the seat lift crank.
Electric Seat lift/ Fixed Seat Tube

Removal
1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/ lowered manually. See page 29.
2. Switch off the main power switch on the control panel.
3. Remove the upper chassis cover. See page 9.
4. Remove the seat including the seat tilt mechanism if the wheelchair is equipped with such device. See page 48.

⚠️ WARNING!
The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.

5. Remove the four fixing screws (see fig. below).
6. Electric seat lift on wheelchair with VR2
   Separate the seat lift cabling at the contacts on the cabling.
   Electric seat lift on wheelchair with R-net
   Disconnect the seat lift cabling from the ICS general module.
7. Lift the Electric Seat Lift/Fixed Seat Post straight up out of the chassis.

For this task the following tools are necessary:
1. Allen key 5 mm.

ICS General Module is fitted at the rear of the chassis.

ICS General Module.
**Electric Seat lift/Fixed Seat Tube**

**Assembly**
Assemble in the reverse order.

1. Fit the Electric seat lift/Fixed seat post into the chassis using the four screws (see fig. below). See page 36.

2. **Electric seat lift on wheelchair with VR2**
   Connect the seat lift cabling at the connector on the cabling.

   **Electric seat lift on wheelchair with R-net**
   Connect the seat lift cabling to the ICS general module.

3. Fit the seat including the seat tilt mechanism if the wheelchair is equipped with such device. See page 36-40.

   **WARNING!**
   The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.

4. Fit the upper chassis cover. See page 9.

   **ICS General Module is fitted at the rear of the chassis.**

   **ICS General Module.**

   **The Fixed Seat Tube/Electric Seat Lift is attached with four screws.**

   **For this task the following tools are necessary:**
   1. Allen key 5 mm.
Seat support
The chassis is equipped with seat support at the front and rear of the chassis.

Removal
1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.
2. Switch off the main power switch on the control panel.
3. Remove the front and upper chassis cover. See page 9.
4. Remove the front seat support, it is fitted with one screw. See fig.

5. Remove the electronics by pulling the locking handles on the left and right handside of the chassis outwards (see fig. below).

6. Remove the rear seat support, it is fitted with two screws. See fig.
Seat support

Assembly
Assemble in the reverse order.

1. Fit the rear seat support, it is fitted with two screws. See fig.

2. Remount the electronics, make sure the locking mechanism on the left and right hands side of the chassis are placed into correct position (see fig. below).

3. Fit the front seat support, it is fitted with one screw. See fig.

4. Remount the front and upper chassis cover. See pages 7-9.
Seat support

Lowest position of Seat Lift/
Fixed Seat Post

If desired, the lowest position can be adjusted +1” or +2” by adding spacers. A maximum of two spacers on each rubber cushion are allowed (+2”). Always make sure that equal amount of spacers on all four rubber cushions are fitted.

1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

2. Release the locking nuts on all four support points by turning the nuts clockwise.

3. To add or remove spacers, remove the rubber cushions and locking nuts by turning them counter clockwise.

4. Add or remove equal amount of spacers on all four support points and then remount the locking nuts and rubber cushions.

5. Lock the position of the rubber cushion by turning the locking nut counter clockwise.

6. Lower the seat lift. Verify how the height of the seat supports four rubber cushions correspond with the height of the seat when the seat lift has reached its lowest position. At the correct height the rubber cushions should be compressed approx. 2 mm. as the seat lift reaches its lowest position. If needed, perform the adjustment according to description on page 35.

For this task the following tools are necessary:
1. Allen key 5 mm.
Seat support

Adjustment

Verify how the height of the seat supports four rubber cushions correspond with the height of the seat when the seat lift has reached its lowest position. At the correct height the rubber cushions should be compressed approx. 2 mm. as the seat lift reaches its lowest position.

1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

2. Release the locking nut underneath the rubber cushion in question by turning it clockwise.

3. Adjust the rubber cushion to desired height by turning it clockwise/counter clockvise.

4. Lock the position of the rubber cushion by turning the locking nut counter clockvise and tightening it.

5. Lower the seat lift. Verify how the height of the seat supports four rubber cushions correspond with the height of the seat when the seat lift has reached its lowest position. If needed, perform the adjustment once again.
Control Panel R-net

Removal
1. Switch off the main power switch on the control panel.
2. Loosen the control panel cabling from its fixing points. Remember how the cabling is positioned; this helps when you come to re-attach it. A cover (3) on the arm rest has to be removed, it is fitted with two screws.
3. Separate the control panel cabling at the connector on the cabling.
4. Remove the control panel (1). It is held in place with two screws (see illustration). These two screws also hold the bracket for the ICS control panel (2), if there is one fitted (see illustration).

Assembly
Assemble in the reverse order.
1. Fit the control panel (1) with the two screws (see fig.). Also fit the bracket for the ICS control panel (2), if the wheelchair is equipped with one, with the same screws (see fig.).
2. Connect the control panel cabling at the connector on the cabling.
3. Re-attach the cabling to its fixing points. Remount the cover (3) on the arm rest using the two screws.

The control panel is attached with two screws. Control Panel connector is positioned behind a cover (3) on the armrest.
ICS master module
The wheelchair seat may be equipped with an ICS control system, and if so, the seat is controlled from the system’s ICS master module. This is fitted in the wheelchair chassis.

Removal
1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.
2. Switch off the main power switch on the control panel.
3. Remove the chassis covers. See page 7-8.
4. Pull the master module straight out of its holder (see fig.).
5. Pull the cover off.
6. Cut off the cable ties that hold the cables and detach the electrical connections. Note their positions for subsequent fitting.

Assembly
Assemble in the reverse order.
Power Module R-net

Removal

1. Switch off the main power switch on the control panel.
2. Switch the main fuse to OFF. See page 40.
3. Remove the chassis covers. See page 7-8.
4. Remove the electronics by gently pulling/spreading the locking handles to disengage the locking tabs on the left and right hand side of the chassis (see fig.).

For this task the following tools are necessary:
1. Wrench 8 mm.

5. Disconnect the electrical connections from the Power Module. Note their positions (see fig. below).
6. Remove the Power Module, it is fitted with two nuts (see fig. below).

![The Power Module is fitted with two nuts.]

**Assembly**

Assemble in the reverse order.

1. Fit the Power Module with the two nuts (see fig. above).
2. Connect the electrical connections to the Power Module. Note their positions (see fig. on previous page).
3. Fit the Power Module bracket with its lower section partly inside the rear edge of the chassis. Secure the electronics with the lock handles on the left and right hand side of the chassis making sure the tabs are reengaged (see fig. on previous page).
4. Fit the chassis covers. See page 8-9.
5. Switch the main fuse to ON. See page 40.
Fuses

Resetting the main fuse
The main fuse also functions as a battery isolator but it is usually called the main fuse.

It is not normally necessary to replace the main fuse as it is automatic and can be reset when it has been triggered. The main fuse can be accessed through a recess in the rear chassis cover. It is reset by switching the switch to ON (see fig.).

⚠️ CAUTION!
If the main fuse is triggered, there is often a major electrical fault. The cause of the fault should be checked carefully before the fuse is reset.

Removal
1. Remove the chassis covers. See page 7-8.
2. Switch the main fuse to OFF (see fig. above).
3. Detach the negative cable from the rear battery.
4. Detach the positive cable from the front battery.
5. Remove the main fuse, which is held in place with two nuts (see fig. below).
6. Disconnect the cables from the main fuse by loosening the screws (see fig.).

⚠️ CAUTION!
Note the direction in which the fuse is installed for subsequent fitting. The ON/OFF position must match the appropriate sticker on the chassis.

For this task the following tools are necessary:
1 Wrench 6 mm.
1 Phillips head screwdriver

⚠️ CAUTION!
Fold the battery connection cables under so they cannot come into contact with the battery terminals.

On chassis wit R-net Cor. ol System the Main Fus is fitted wit two nuts.

Main fuse cable connection.
Fuses

Assembly
Assemble in the reverse order.
1. Switch the new main fuse to OFF.
2. Connect the cables to the new main fuse.

⚠️ CAUTION!

Note the direction in which the fuse is installed for subsequent fitting. The ON/OFF position must match the appropriate sticker on the chassis. Check that the cables are firmly attached.

3. Fit the new main fuse on the bracket with the two nuts. See fig.
4. Reattach the battery connection cables to the batteries.
5. Fit the chassis covers. See page 8-9.
6. Switch the main fuse to ON (see fig.).

---

For this task the following tools are necessary:
1 Wrench 6 mm.
1 Phillips head screwdriver

Main fuse cable connection.

On chassis with R-net Control System the Main Fuse is fitted with two nuts.

Main fuse/battery isolator (On/Off).
Lights (accessories)

Removing the front lights & indicators
1. Switch off the main power switch on the control panel.
2. Remove the front and upper chassis covers. See page 8-9.

Removal of lights
3. Disconnect the lights at the connection on the cabling. This is positioned on the inside of the chassis, next to the seat lift (see fig.).

4. Remove the front link arm covers. See page 10. Take note of how the lights cabling is placed underneath the cover of the link arm (see fig.).

5. Remove the light, it’s mounted with two screws (see fig.).

Removal of indicators
6. Disconnect the indicator lights at the connector on the cabling. This is positioned on the inside of the chassis, next to the seat lift.

7. The indicators are delivered mounted on the drive motor cover. Remove the drive motor cover, it’s fitted with two screws (see fig.).

For this task the following tools are necessary:
1 Torx key TX20.
1 Allen key 3 mm.
Lights (accessories)

Assembly of front lights & indicators
Assemble in the reverse order.

Assembly of lights
1. Fit the light with the two screws. Adjust the light to desired angle before tightening the upper screw (see fig.).
2. Fit the front link arm covers. See page 10. Take care of how the lights cabling is placed underneath the cover of the linkarm (see fig.).
3. Connect the indicators cabling at the connectors on the cabling. This is positioned on the inside of the chassis, next to the seat lift.

Assembly of indicators
4. The indicators are delivered mounted on the drive motor cover. Fit the drive motor cover, it's fitted with two screws (see fig.). Fit the indicators cabling together with the drive motor cabling in to the wheelchairs chassis.
5. Connect the indicators cabling to the connectors on the cabling. This is positioned on the inside of the chassis, next to the seat lift (see fig. below).

For this task the following tools are necessary:
1. Torx key TX20.
2. Allen key 3 mm.
Lights

Removing the rear lights & indicators

The rear lights and indicators are delivered complete with the chassis rear cover.

1. Switch off the main power switch on the control panel.
2. If the upper chassis cover isn’t removed, remove its rear knobs and lift its rear end to release the rear chassis cover, raise the seat if needed. Remove the rear chassis cover by lifting it upwards/backwards, be sure to disengage the tab.

3. Disconnect the rear lights and indicators cabling (see fig.). These are connected to the connectors at the rear of the wheelchairs chassis (see fig.).

Assembly

Assemble in the reverse order.

1. Reconnect the rear lights cabling (see fig.).
2. Fit the cover partially inside the chassis at the lower edge (see fig. above).
3. Make sure the upper cover holds the rear cover and Remount the two knobs (see fig. above).
Control System

The wheelchair’s control system can be programmed in order to optimize the performance of the wheelchair while also maintaining a high level of safety, regardless of other settings and options on the wheelchair. The control system can also be programmed in order to make adjustments needed for a specific user.

To get more information about standard parameter files, contact your dealer, or Permobil Inc. USA.
Seat
Removal

1. Raise the seat to the highest position. If the wheelchair is equipped with a fixed seat post or if the seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

2. Switch off the main power switch on the control panel.

3. Remove the cushion from the seat.

4. Remove the seat plates, which are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration. First remove the screws, then use your hand to carefully push the seat plate from below to release the quick-mount clamps at the front.

5. Remove the control panel. Loosen the control panel cabling from its fixing points. Remember how the cabling is positioned; this helps when you come to re-attach it.

6. On wheelchair equipped with seat tilt, separate the cabling for the seat angle mechanism at the contact on the cabling. The contact is at the front right corner of the seat angle mechanism, next to the other cabling (see fig.).

7. Remove the four screws that hold the seat in place (see fig.). The seat can be mounted in three different positions, depending on the current seat depth. Note the position the seat is mounted in for future reference.

8. Lift the seat off the seat lift/seat column.

⚠️ WARNING!
The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.
Seats
Assembly

Assemble in the reverse order.

1. Mount the seat using the four screws. See the fig. It can be mounted in three different positions, depending. For more information, see the seats service manual.

2. Fit the control panel. See page 42-43. Re-attach the cabling to its fixing points.

3. Mount the seat plates by first mounting them with the quick-mount clamps at the front and then the screws at the back. Fit the quick-mount clamps by pushing them straight into the holes.

4. Fit the cushion in desired position by pressing it against the seat plates.

5. Lower the seat to desired position. If the electric seat lift does not work normally because the batteries are discharged or the adjustment device is defective, the seat can be raised/lowered manually. See page 29.

For this task the following tools are necessary:
1 Allen key 5 mm.
1 Allen key 6 mm.

The seat is held in place by four screws.

The seat plates on Corpus 3G are held in place by two screws at the back edge and two quick-mount clamps at the front.
Adjustment

Adjusting the seat depth

The seat depth can be adjusted to suit different users. There are seven fixed levels, each 1 inch apart.

Adjustment of the seat depth is performed by mounting the front section of the Seat frame incl. Leg rest into desired positions according to the table on page 49. When the seat depth is adjusted it may be necessary to replace cushions, seat plates and UniTrack rails for ones of the appropriate length. The mounting position for the seat on the seat lift/fixed seat column may also need adjusting. See page 70-81.

1. Remove the seat cushion by lifting it straight up. It is attached by means of Velcro on the rear of the cushion.

2. Remove the seat plates, which are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration. First remove the screws, then use your hand to carefully push the seat plate from below to release the quick-mount clamps at the front.

3. Remove the UniTrack rails which are each held in place by two screws. See the illustration.

For this task the following tools are necessary:

1. Allen key 5 mm

The seat plates are held in place by two screws at the back edge and two quick-mount clamps at the front.

The UniTrack rails are fixed in place with two screws each.
4. Remove the five screws marked (L) securing the Seat frames front section, see fig below.
5. Adjust the seat depth by moving the front section of the seat frame to the required position. The rails with which the seat depth is adjusted are marked with the settings for each potential position.
6. Secure it at the required setting by remounting the five screws.

<table>
<thead>
<tr>

<td>25&quot;</td>
</tr>
</tbody>
</table>

7. Mount UniTrack rails of a suitable length for the seat depth setting. The rails are each held in place by two screws. See the illustration on page 48. Use a torque wrench to tighten the screws.

**Tightening torque 9.8 Nm.**

8. Mount seat plates of a suitable length for the seat depth setting. The plates are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration on page 48.

9. Fit a cushion of a suitable length/width for this setting. Secure the cushion in place using the Velcro on the back of the cushion.

**WARNING!**

The seat's mounting position on the seat lift/fixed seat column may need to be changed following adjustment of seat depth. Failure to do this correctly may impair the driving properties of the wheelchair, leading to an increased risk of personal injury and damage to property, including damage to the wheelchair.
Adjusting the seat width

The seat width can be adjusted to give the user optimal comfort. There are four fixed levels, each 25 mm apart.

1. Remove the seat cushion by lifting it straight up. It is attached by means of Velcro on the rear of the cushion.

2. Remove the seat plates, which are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration. First remove the screws, then use your hand to carefully push the seat plate from below to release the quick-mount clamps at the front.

3. Remove the eight screws securing the seat width adjustment unit. See the illustration below.

4. Adjust the seat width by moving the right or left section of the seat frame to the required position. The rails with which the seat width is adjusted are marked with the settings for each potential position. The scale is marked with "millimeters" and "inches".

5. Secure it at the required setting by replacing the eight screws.

6. Remount the seat plates using two screws at the back edge and two quick-mount clamps at the front. See the illustration.

7. Fit a cushion of a suitable length/width for this setting. See the table on 89. Secure the cushion in place using the Velcro on the back of the cushion.

For this task the following tools are necessary:
1. Allen key 5 mm

The seat plates are held in place by two screws at the back edge and two quick-mount clamps at the front.

The seat width is fixed using eight screws.
Adjusting the backrest height

The backrest height can be adjusted to give the user optimal comfort. Adjustment is possible by moving the locking mechanism on the lower section of the backrest between six fixed stages 25 mm apart.

1. Remove the backrest cushion by pulling it straight forwards. It is attached by means of Velcro on the rear of the cushion.
2. Remove the upper section of the backrest by carefully pulling it straight up. See fig.

3. Remove the knob holding the lower part of the backrest. See fig.
4. Remove the lower section of the backrest by pulling the backrest plate straight up so it can be removed from the four locking devices. See the illustration.

5. Remove the two screws holding the backrest locking mechanism in place. See the illustration.
6. Adjust the height of the backrest by mounting the locking mechanism in desired position.
7. Remount the lower section of the backrest on the seat by carefully fitting the keyholes on the corresponding pegs and then securing it by tightening the knob. See fig.
8. Slide the upper section of the backrest down until secured in position by the locking mechanism. See the illustration above.
9. Fit a cushion of a suitable height/width for this setting. See the table on page 87. Secure the cushion in place using the Velcro on the back of the cushion.

For this task the following tools are necessary:
1. Allen key 3 mm
Adjusting the armrest height

The height of the armrest can be adjusted to provide the user with optimal comfort. The scale on the back of the backrest shows the current height setting for the arm rests.

1. Undo the four screws (A) and release the two quick locks (B) on the rear of the back rest that secure the height of the arm rest. See figure.

⚠️ WARNING!

Do not subject the armrests to load when adjusting them. Risk of crushing.

2. Adjust to the required position using the adjustment screw on the rear of the backrest. See the illustration below.

3. Secure the height of the arm rest by engaging the two quick locks and tightening the four screws on the rear of the back rest. See figure.

For this task the following tools are necessary:

1. Allen key 5 mm

The armrest height is fixed using four screws. To perform this height adjustment, use the adjustment screw in the center of the backrest.
Adjusting the armrest angle

The angle of the armrest can be easily adjusted to provide the user with optimal comfort.

1. Loosen the check-nut on the adjustment bar in question. See the illustration.
2. Adjust the armrest angle by turning the adjustment bars. See the illustration.
3. Fix into desired position by tightening the check-nut. See the illustration.

⚠️ WARNING!

Do not subject the armrests to load when adjusting them. Risk of crushing.
Individual adjustment of armrest height/angle

For this task the following tools are necessary:
1 Allen key 5 mm

⚠️ WARNING!

Do not subject the armrests to load when adjusting them. Risk of crushing. This type of adjustment is only performed in special cases. It may have negative effects on the movement of the armrest when raising/lowering the backrest.

The height/angle of the armrest is normally adjusted as described on s 32-33. If specifically required, the armrests can be adjusted individually for users who want the left and right armrest at different heights and/or angles. This adjustment is only performed in special cases. It may have negative effects on the movement of the armrest when raising/lowering the backrest.

1. Adjust the armrest height by turning the adjustment bars (C). See the illustration.

2. The angle of the armrest is secured using a screw. Move the screw from a fixed position (A) to a flexible position (B). See the illustration below.

3. Adjust the armrest to the required angle and secure by tightening the screw. See the illustration below.
Adjusting the armrest width

The distance between the armrests can be adjusted to give the user optimal comfort.

1. Loosen the screw for armrest width adjustment approximately 3 turns. See the illustration.
2. Push in/pull out the armrest shaft to the desired position.
3. Secure it at the required setting by retightening the screw.

The armrest width is fixed using one screw.

Adjusting the thigh support

The position of the thigh support can be adjusted forwards or backwards to give the user optimal comfort. Slide the thigh support forwards or backwards to the desired position.

The position of the thigh support can be adjusted
Repairs

Replacing a UniTrack rail

UniTrack rails are available in five different lengths that are used depending on the seat depth selected.

Removal
1. Remove the two screws that hold the rail in place. See the illustration.

Mounting
1. Mount the UniTrack rail using two screws. See the illustration. Use a torque wrench to tighten the screws.

Tightening torque 9.8 Nm.

For this task the following tools are necessary:
1 Allen key 5 mm

The UniTrack rail is held in place by two screws.
Replacing seat plates
Seat plates are available in five different lengths that are used depending on the seat depth selected.

Removal
1. Remove the seat cushion by lifting it straight up. It is attached by means of Velcro on the rear of the cushion.
2. Remove the seat plates, which are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration. First remove the screws, then use your hand to carefully push the seat plate from below to release the quick-mount clamps at the front.

Mounting
1. Mount the seat plates by first mounting them with the quick-mount clamps at the front and then the screws at the back. Fit the quick-mount clamps by pushing them straight into the holes.
2. Fit the seat cushion by pressing it against the seat plate in the desired position to ensure good contact for the Velcro on its underside.

For this task the following tools are necessary:
1. Allen key 3 mm
Replacing backrest plates

Backrest plates are available in three different widths to fit most users. If you change the size of the backrest plates you will also have to change the cushion to one that is a suitable size. See the table on 87.

Removal

1. Remove the backrest cushion by pulling it straight forwards. It is attached by means of Velcro on the rear of the cushion.
2. Remove the upper section of the back rest by carefully pulling it straight up. See fig.

3. Remove the knob securing the position of the lower backrest plate. See the illustration.

4. Remove the lower section of the back rest by pulling the backrest plate straight up so it can be removed from the four locking devices. See the illustration.
Mounting

1. Mount the lower backrest plate by lining up the four "keyholes" on the locking devices and then sliding the plate straight down.

2. Secure the position of the plate by fitting the knob. See the illustration.

3. Mount the upper backrest plate by sliding it down into the lower plate's grooves. The height of the backrest may need to be adjusted. This is described on page 51.

4. Fit the backrest cushion by pressing it against the plate in the desired position to ensure good contact for the Velcro on its underside. The lower section of the cushion is fastened to the seat plate by means of Velcro.
Replacing the armrest height adjustment mechanism

Removal

1. Remove the backrest plates. For a detailed description, see 18.
2. Loosen the two screws holding the plastic cover to the back of the backrest. Twist the plastic cover downwards. See the illustration.

3. Remove the BUS contacts from the contact block and divide the cabling for the ICS switchbox at the contacts on the cabling.

4. Remove the four screws that hold the armrests in place. See the illustration. Then carefully move the armrests downwards or backwards.
5. Remove the joint for the backrest slide function, which is held in place by one screw. See the illustration.

For this task the following tools are necessary:

- 1 Allen key 3 mm
- 1 Allen key 5 mm

The plastic cover is fixed using two screws.

1. The contact on the ICS switchbox cabling is above the contact block. 2. The BUS contacts are mounted on the contact block.

The armrests are held in place by four screws. The joint for the backrest slide function is held in place by one screw.
6. Remove the backrest profile, which is secured using two screws on the left and right. See the illustration. Remove by undoing the screws and pulling the backrest profile straight up.

7. Loosen the screws on the left and right side of the backrest profile and then remove its end cover by sliding it straight out.

8. Remove the adjustment bar brackets, which are each held in place by two screws. See the illustration at bottom left.

9. Screw the adjustment bar down far enough to be able to prise it up out of the groove on the backrest profile. See the illustration at bottom right.

The backrest profile is secured using two screws on the left and right

The end cover of the backrest profile is secured using one screw on the left side and one on the right

The adjustment bar brackets are each held in place by two screws

Screw the adjustment bar down far enough to be able to prise it up out of the groove on the backrest profile
Mounting

1. Push the threaded rod into the backrest profile and at the same time screw on the driver (1). See the illustration below.

2. Apply threadlocker (Loctite 2701) to the ends of the threaded rod and fit the two end pieces (2 & 3) onto the threaded rod. See the illustration below.

3. Mount the adjustment bar brackets, which are each held in place by two screws. See the illustration.

4. Remount the end cover of the backrest profile by pushing it straight into the end of the profile. Secure the cover by tightening the screws on the left and right. See the illustration.
5. Remount the backrest profile by fitting the bracket into the profile groove on the left and right sides. Slide the profile downwards until the stop on the bracket is touching the end of the backrest profile on both the left side and the right. Secure the backrest profile by tightening the two screws on the left and right. See the illustration. Tighten the screws using a torque wrench.

**Tightening torque 9.8 Nm.**

6. Mount the armrests using the four screws screws. See the illustration. Tighten the screws using a torque wrench.

**Tightening torque 9.8 Nm.**

7. Mount the joint for the backrest slide function using the screw supplied. See the illustration. Tighten the screw using a torque wrench.

**Tightening torque 9.8 Nm.**

8. Mount the BUS contacts on the contact block and mount the cabling for the ICS switchbox at the contact on the cabling. See the illustration at bottom left.

9. Remount the plastic cover on the back of the backrest using the two screws supplied. See the illustration at bottom right.

10. Remount the backrest plates. For a detailed description, see 19.

---

1. The contact on the ICS switchbox cabling is above the contact block. 2. The BUS contacts are mounted on the contact block.

---

The backrest profile is secured using two screws on the left and right

The armrests are held in place by four screws. The joint for the backrest slide function is held in place by one screw

The plastic cover is attached using two screws
Replacing the manual legrest adjustment unit

For this task the following tools are necessary:

1. Allen key 5 mm
2. Allen key 8 mm

⚠️ WARNING!

Do not subject the legrest to load during mounting or removal. Risk of crushing.

Removal
1. Switch off the main power switch on the control panel.
2. Remove the UniTrack rail from the right side of the seat. See page 56 for further information.
3. Remove the lock nut from the front bracket of the adjustment unit. See the illustration below.
4. Remove the adjustment unit, which is held in place by two screws. See the illustration below.

Mounting
1. Fit the rear fixing screw (M6x12) and washer for the adjustment unit. See the illustration. Tighten the screw using a torque wrench. **Tightening torque 9.8 Nm.**
2. Fit the front fixing screw (M10x60), spacer and washer for the adjustment unit. See the illustration. Tighten the screw using a torque wrench. **Tightening torque 35 Nm.**
3. Fit the lock nut and washer on the front bracket of the adjustment unit. See the illustration.
4. Mount the UniTrack rail on the right side of the seat. See page 56 for further information.

---

*The manual legrest adjustment unit is held in place by two screws*
Reparatur des manuellen Rückenkipphebungsmechanismus

**Warnung!**

*Do not subject the backrest to load during mounting or removal. Risk of crushing.*

**Entfernung**

**Befestigung**

---

*The manual backrest adjustment unit is held in place by two screws*
Replacing the legrest actuator

For this task the following tools are necessary:
1 Allen key 5 mm
1 Allen key 8 mm

⚠️ WARNING!
Do not subject the legrest to load during mounting or removal. Risk of crushing.

Removal
1. Switch off the main power switch on the control panel.
2. Remove the UniTrack rail from the right side of the seat. See page 56 for further information.
3. Remove the actuator contact from the contact block above the actuator. See the illustration. Remove the contact by pulling it straight out. Loosen the actuator cabling from its fixing points. Remember how the cabling is positioned; this helps when you come to re-attach it.
4. Remove the lock nut from the front bracket of the actuator. See the illustration below.
5. Remove the actuator, which is held in place by two screws. See the illustration below.

Mounting
1. Fit the rear fixing screw (M6x12) and washer for the actuator. See the illustration. Tighten the screw using a torque wrench. **Tightening torque 9.8 Nm.**
2. Fit the front fixing screw (M10x60), spacer and washer for the actuator. See the illustration. Tighten the screw using a torque wrench. **Tightening torque 35 Nm.**
3. Fit the lock nut and washer on the front bracket of the actuator. See the illustration.
4. Secure the cabling for the actuator in its fixing points. Consider the arrangement of the cables carefully and make sure there is no risk of them getting trapped or otherwise damaged.
   - Connect the actuator contact to the contact block on the right side of the seat. See the illustration. Fit the contact by pushing it straight in at any point.
5. Mount the UniTrack rail on the right side of the seat. See page 56 for further information.
The legrest actuator is held in place by two screws.

The actuator cabling is connected to the contact block above the actuator.
Replacing the backrest actuator

For this task the following tools are necessary:
1. Allen key 5 mm
2. Allen key 8 mm

⚠️ WARNING!
Do not subject the legrest to load during mounting or removal. Risk of crushing.

Removal
1. Switch off the main power switch on the control panel.
2. Remove the UniTrack rail from the left hand side of the seat. See page 56 for further information.
3. Remove the seat plates. See page 57 for further information.
4. Remove the actuator contact from the contact block on the right side of the seat. See the illustration. Remove the contact by pulling it straight out. Loosen the actuator cabling from its fixing points. Remember how the cabling is positioned; this helps when you come to re-attach it.
3. Hold the backrest in a steady grip as you remove the actuator unit. Remove the circlip from the rear bracket of the actuator. See the illustration. Once the rear bracket has been removed the backrest can be angled forward to rest on the seat cushion.
4. Remove the locking mechanism from the front bracket of the actuator, it is attached with a screw. See the illustration.

Mounting
1. Mount the front end of the actuator with the locking mechanism. See the illustration.
2. Mount the rear end of the adjustment unit, fix into position using the circlip. See the illustration.
3. Secure the cabling for the actuator in its fixing points. Consider the arrangement of the cables carefully and make sure there is no risk of them getting trapped or otherwise damaged. Connect the actuator contact to the contact block on the right side of the seat. See the illustration above. Fit the contact by pushing it straight in at any point.
4. Mount the UniTrack rail on the left side of the seat. See page 56 for further information.
5. Mount the seat plates. See page 57 for further information.
The actuator cabling is connected to the contact block on the right hand side of the seat.
Replacing the seat angle mechanism

Removal
1. Switch off the main power switch on the control panel.
2. Remove the seat cushion by lifting it straight up. It is attached by means of Velcro on the rear of the cushion.
3. Remove the seat plates, which are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration. First remove the screws, then use your hand to carefully push the seat plate from below to release the quick-mount clamps at the front.

For this task the following tools are necessary:
- 1 Allen key 5 mm
- 1 Allen key 8 mm

4. Divide the cabling for the seat angle mechanism at the contact on the cabling. The contact is at the front right corner of the seat angle mechanism, next to the other cabling. See the illustration.
5. Remove the six screws that hold the seat in place. Have someone help you by holding the seat while you remove the screws, and then helping you lift the seat and lay it next to the chassis. Be careful with the seat cabling.

⚠️ WARNING!
The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.
6. Remove the four screws that hold the seat angle mechanism in place. See the illustration below. The seat angle mechanism can be mounted in six different positions, depending on the depth of the seat. Note the position the seat angle mechanism is mounted in for future reference.

Lift the seat angle mechanism off the seat lift/seat column.

---

**The seat angle mechanism mounted in position (B).**

*The four screws are mounted in position (2) according to table below.*

<table>
<thead>

Mounting
1. Mount the Seat stabilisator brackets in the correct position, they should be mounted in different positions depending on the seat depth setting. See the fig. below and the table on next page. Use a torque wrench to tighten the screws. **Tightening torque 24 Nm.**

2. Mount the seat angle mechanism in the correct position using the four screws. See the illustration. It should be mounted in different positions, depending on the seat depth setting. The mounting position is defined by the position of the seat post. See the table. Use a torque wrench to tighten the screws. **Tightening torque 24 Nm.**
The seat angle mechanism mounted in position (B).
The four screws are mounted in position (2) according to table below.

<table>
<thead>
<tr>
<th>Seat Depth Position</th>
<th>Seat stabilisator bracket</th>
<th>Position Tilt to center hole in seatpost</th>
<th>Tilt mechanism Mounting holes no:</th>

</tbody>
</table>
3. Mount the seat using the six screws. Have someone help you lift the seat and then hold it in place while the screws are inserted. Use a torque wrench to tighten the screws. **Tightening torque 9.8 Nm.**

⚠️ **WARNING!**
The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.

3. Connect the cabling for the seat angle mechanism to the wheelchair's ICS Master Module. If the cabling for the ICS Master Module is already there, connect it to the contact that is at the front right corner of the seat angle mechanism, next to the other cabling. See the illustration.
When mounting new cabling for the ICS Master Module, mount it together with the rest of the cabling running down to the wheelchair chassis and there connect it to the ICS Master Module. For further information on the ICS Master Module, see the chassis service manual.
4. Mount the seat plates by first mounting them with the quick-mount clamps at the front and then the screws at the back. Fit the quick-mount clamps by pushing them straight into the holes.

The seat plates are held in place by two screws at the back edge and two quick-mount clamps at the front.
Replacing the fixed seat mounting plate

Removal
1. Switch off the main power switch on the control panel.
2. Remove the seat cushion by lifting it straight up. It is attached by means of Velcro on the rear of the cushion.
3. Remove the seat plates, which are held in place by two screws at the back edge and two quick-mount clamps at the front. See the illustration. First remove the screws, then use your hand to carefully push the seat plate from below to release the quick-mount clamps at the front.
4. Remove the six screws that hold the seat in place. Have someone help you by holding the seat while you remove the screws, and then helping you lift the seat and lay it next to the chassis. Be careful with the seat cabling.

⚠️ WARNING!

The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.

For this task the following tools are necessary:
1. Allen key 5 mm
2. Allen key 8 mm

The seat plates are held in place by two screws at the back edge and two quick-mount clamps at the front.

The seat is held in place by six screws.
5. Remove the four screws that hold the seat mounting plate in place. See the illustration below. The seat mounting plate can be mounted in three different positions, depending on the depth of the seat. Note the position the seat mounting plate is mounted in for future reference. Lift the seat mounting plate off the seat lift/seat column.

The seat mounting plate is mounted in position (B).

The four screws are mounted in position (2) according to table below.

<td>4 + 2</td>
</tr>
</tbody>
</table>
3. Mount the seat using the six screws. Have someone help you lift the seat and then hold it in place while the screws are inserted. Use a torque wrench to tighten the screws. **Tightening torque 9.8 Nm.**

⚠ WARNING!

The seat is heavy. This work should therefore always be performed by two people. Be careful with the cabling.
4. Mount the seat plates by first mounting them with the quick-mount clamps at the front and then the screws at the back. Fit the quick-mount clamps by pushing them straight into the holes.

The seat plates are held in place by two screws at the back edge and two quick-mount clamps at the front.
Replacing the legrest

For this task the following tools are necessary:
1 Allen key 5 mm
1 Allen key 8 mm

⚠️ WARNING!
Do not subject the legrest to load during mounting or removal. Risk of crushing.

Removal

1. Switch off the main power switch on the control panel.
2. Remove the legrest's top cover by carefully pulling it straight out. See the illustration.
3. Remove the front ends of the UniTrack rails, they are attached with a screw from underneath. See the illustration.
4. Remove the front bracket of the manual adjustment unit/actuator. See the illustration below. Start with the lock nut and the washer on the inside of the bracket, then remove the screw and washer.
5. Remove the legrest, which is held in place by two screws and spacers. See the illustration below.

The legrest is held in place by two screws and spacers.
The front bracket of the actuator is held in place by a screw and lock nut.
Mounting

1. Mount the legrest using the two screws and spacers. See the illustration on the previous page. Use a torque wrench to tighten the screws. **Tightening torque 24 Nm.**

2. Mount the front bracket of the manual adjustment unit/actuator. See the illustration on the previous page. Start with the screw and washer. Tighten the screw using a torque wrench. **Tightening torque 47 Nm.** Then fit the lock nut and washer on the inside of the bracket.

3. Mount the front ends of the UniTrack rails, they are attached with a screw from underneath. See the illustration.

4. Mount the legrest's top cover by carefully pressing its bracket into place on the legrest's fixing screws/spacers. See the illustration.
Replacing a legrest strap

For this task the following tools are necessary:
1 Allen key 3 mm
1 Steel ruler

⚠️ WARNING!
Do not subject the legrest to load during mounting or removal. Risk of crushing.

Removal
1. Switch off the main power switch on the control panel.
2. Lift up the legrest's top cover. See the illustration.
3. Remove one end of the legrest strap by carefully raising the lower section of the legrest slightly and at the same time removing the two screws on the front of the legrest. Then pull the mounting plate out of the loop of the strap.

Once the strap is loosened the lower section of the legrest will become loose and can be carefully placed on the floor.
4. Remove the two screws holding the strap bracket on the back of the legrest in place. See the illustration.
5. Pull the strap out of the legrest mechanism.

Mounting
1. Pull the strap through the bracket on the back of the legrest. Measure to make sure that the strap extends 85 mm from the bracket. Secure the strap by tightening the two screws on the bracket. See the illustration.
2. Slide the lower section of the legrest up and pull the strap through the legrest mechanism. See the illustration.
3. Place the mounting plate in the loop of the strap and then mount this on the front of the legrest using the two screws. See the illustration.
Replacing the legrest slide bushings

For this task the following tools are necessary:
1 Allen key 3 mm

⚠️ WARNING!
Do not subject the legrest to load during mounting or removal. Risk of crushing.

Removal
1. Set the angle of the legrest to its outermost position.
2. Switch off the main power switch on the control panel.
3. Remove one end of the legrest strap by carefully raising the lower section of the legrest slightly and at the same time removing the two screws on the front of the legrest. Pull the mounting plate out of the loop of the strap. See the illustration below.
   Once the strap is loosened the lower section of the legrest will become loose and can be carefully pulled downwards/forwards until the lower section of the legrest is completely loose.
4. Remove the slide bushing in the upper section of the legrest, which is attached using two screws. See the illustration above.
5. Remove the slide bushing in the lower section of the legrest, and at the same time use a suitable tool to press in the locking tabs on the bushing, located in the hole immediately below the top edge of the legrest. See the illustration.

Mounting
1. Fit the slide bushing in the lower section of the legrest, making sure the locking tabs on the bushing are securely fixed in the hole in the legrest. See the illustration.
2. Fit the slide bushing in the upper section of the legrest using the two screws. See the illustration above.
3. Slide the upper and lower sections of the legrest together, and pull the legrest strap through the legrest mechanism. See the illustration.
4. Place the mounting plate in the loop of the strap and then mount this on the front of the legrest using the two screws. See the illustration.
Replacing the footplates

Removal
1. Switch off the main power switch on the control panel.
2. Remove the screw holding the footplate in place. See the illustration below.
3. Remove the footplate friction brake by taking the parts off the shaft. See the illustration below.
4. Remove the footplate by taking it off the shaft. See the illustration below.

Mounting
1. Mount the footplate by sliding it onto the shaft. See the illustration below.
2. Mount the footplate friction brake by sliding the parts onto the shaft. Make sure that the metal butt is positioned in the intended hole in the footplate. See the illustration to the right.
3. Fit the screw that holds the footplate in place. See the illustration below. Tighten the screw using a torque wrench. **Tightening torque 33 Nm.**

For this task the following tools are necessary:
1. Allen key 5 mm

⚠️ WARNING!
Do not subject the footplate to load during mounting or removal. Risk of crushing.

The friction brake’s metal butt is in place in the intended hole in the footplate

The footplate and its friction brake

Troubleshooting R-net

The following troubleshooting guide describes a number of faults and events which may occur when you use your wheelchair, together with suggested remedies. Note that this guide cannot describe all the problems and events which may occur and you should always contact your service contact or Permobil in case of doubt.

<table>
<thead>
<tr>
<th>EVENT</th>
<th>POSSIBLE CAUSE</th>
<th>REMEDY</th>
</tr>
</thead>
<tbody>
<tr>
<td>The wheelchair will not start.</td>
<td>Batteries discharged.</td>
<td>Charge the batteries.</td>
</tr>
<tr>
<td></td>
<td>The cable connection to the control panel has come loose.</td>
<td>Insert the cable in the control panel.</td>
</tr>
<tr>
<td></td>
<td>Main fuse blown.</td>
<td>Check possible causes carefully before resetting/replacing the main fuse. See page 50.</td>
</tr>
<tr>
<td>The wheelchair cannot be driven.</td>
<td>Battery charger connected.</td>
<td>Stop charging and disconnect the charging cable from the wheelchair’s charging socket.</td>
</tr>
<tr>
<td></td>
<td>Brake release activated.</td>
<td>Reset the brake release.</td>
</tr>
<tr>
<td></td>
<td>The wheelchair is locked.</td>
<td>Unlock the wheelchair. See user manual</td>
</tr>
<tr>
<td></td>
<td>The magnetic brakes are released.</td>
<td>Engage the magnetic brakes.</td>
</tr>
<tr>
<td>An exclamation mark on the control panel display is flashing rapidly and the wheelchair will not run.</td>
<td>Electronics fault.</td>
<td>See pages 57–70.</td>
</tr>
<tr>
<td>The wheelchair can only be driven at reduced speed.</td>
<td>Seat lift raised too high.</td>
<td>Lower seat lift.</td>
</tr>
<tr>
<td>The wheelchair cannot be charged.</td>
<td>Main fuse blown.</td>
<td>Check possible causes carefully before resetting/replacing the main fuse. See page 50.</td>
</tr>
<tr>
<td>The wheelchair “switches itself off” after a certain period of inactivity.</td>
<td>The electronics’ energy-saving mode has been activated.</td>
<td>Switch the wheelchair on again using the start key on the control panel.</td>
</tr>
</tbody>
</table>
Troubleshooting R-net

R-net diagnostics
When an error or a fault occurs in the wheelchair’s electronics, information on it is displayed in the control panel’s display. This information can then be used to diagnose where the error/fault occurred and its cause.

Troubleshooting and repairs must always be performed by competent personnel with good knowledge of the wheelchair’s electronics. More information on troubleshooting and remedies can be found in the service manual for this wheelchair model.

Diagnostic screens
Current diagnostic screen
When the control system’s integrated protection circuits have been triggered so that the control system can no longer operate the wheelchair, a diagnostic screen is displayed in the control panel’s display.

This indicates a system fault, i.e. R-net has detected a problem somewhere in the wheelchair’s electrical system.

**CAUTION!** If the fault is in a module that is not currently being used, it will still be possible to drive the wheelchair, but the diagnostic screen is displayed occasionally.

Switch off the wheelchair and leave it off for a few minutes. Then restart the wheelchair. If the fault persists, you must switch off the wheelchair and get in touch with your service contact. Write down the information displayed in plain text in the control panel’s display and pass it on to your service contact.

Do not use the wheelchair until the problem has been remedied or you have received other instructions from your service contact.

⚠️ **WARNING!**

Diagnostics should only be performed by persons with sound knowledge of the wheelchair’s electronic control system. Incorrect or poorly performed repair works may make it dangerous to use the wheelchair. Permobil accepts no liability for any personal injury or damage to the wheelchair and its surroundings that occurs on account of incorrect or poorly performed repair work.
Troubleshooting R-net
Example of a screen showing a system fault

Identified module
This indicates the control system module that detected the problem.

PM= Power module
JSM= Joystick module

Error message
The error message provides a brief description of the error type.

Error code
The four-digit code indicates which protection circuit has been triggered.

2.1.4 Example
The screen example shown below displays the following information:

Identified module: Power module error
Error message: Low Battery
Error code: 2C00

This means that the battery needs charging or that the battery has not been connected properly.

- Check the battery connections. Attempt to charge the battery if it is properly connected.
Troubleshooting R-net

2.2 System log

All errors are saved in the system log regardless of whether they have been remedied or are still active. The system log saves the error messages and the number of times they arise. The errors are saved in their respective modules within the system.

The system log is accessed by means of programming directly in the system (On Board Programming, OBP).

Contact Permobil or your repair engineer for more information on OBP.

Go to OBP mode

- Select System from the menu.
- Select Diagnostics from the menu.
- The diagnostics screen will now appear, showing the connected modules and version history. See the illustration below.
- If a module has experienced no errors, the message No Entries will be displayed, otherwise something similar to the screenshot below will be displayed.
Troubleshooting R-net

3. Definitions of diagnostics messages

When an error message has been displayed and the defective module has been identified, you can use the following definitions to determine the possible cause of the error and what remedial action is required to correct it.

<table>
<thead>
<tr>
<th>Error message</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Joystick Error</td>
<td>Go to section 3.1.</td>
</tr>
<tr>
<td>Low Battery</td>
<td>Go to section 3.2.</td>
</tr>
<tr>
<td>High Battery</td>
<td>Go to section 3.3.</td>
</tr>
<tr>
<td>M1 Brake Error</td>
<td>Go to section 3.4.</td>
</tr>
<tr>
<td>M2 Brake Error</td>
<td>Go to section 3.4.</td>
</tr>
<tr>

Troubleshooting R-net

3.1 Joystick Error
The commonest cause for this error is that the joystick was moved away from its central position before and during the time at which the control system was switched on. The screen for a shifted joystick is displayed for 5 seconds. If the joystick is not released during this time, a joystick error is registered. Even if an error screen is not displayed, the error and the number times it arises is registered in the system log.

- *Ensure that the joystick is in the central position and start up the control system.*

If the error persists, the joystick or joystick module may be defective. Read more in section 5.

3.2 Low Battery
This occurs when the control system detects that the battery voltage is lower than 16 V.

- *Check the batteries and their connection to the control system.*

If the error persists after the batteries and connections have been checked, the power module may be defective. Read more in section 5.

3.3 High Battery
This occurs when the control system detects that the battery voltage is higher than 35 V. The commonest causes for this error are that the battery has been overcharged or a poor connection between the control system and the batteries.

- *Check the batteries and their connection to the control system.*

If the error persists after the batteries and connections have been checked, the power module may be defective. Read more in section 5.

3.4 Brake Error
This occurs when the control system detects a problem in the solenoid brakes or the connections to them.

1505 - M1 Brake Error
1506 - M2 Brake Error

- *Check the solenoid brakes, their cables and the connections to the control system.*

If the error persists after the checks listed above, the power module may be defective. Read more in section 5.

3.5 Motor Error
This occurs when the control system detects that a motor has been disconnected.

3B00 - M1 Motor Error
3C00 - M2 Motor Error

- *Check the motors, their cables and the connections to the control system.*

If the error persists after the checks listed above, the power module may be defective. Read more in section 5.

3.6 Inhibit Active
This occurs when one of the inhibit signals is active and is in blocked mode.

The last two digits of the error code indicate the active inhibit signal. The code is hexadecimal.

1E01 - For inhibit signal 1.
1E09 - For inhibit signal 9.
1E0A - For inhibit signal 10.

- *Cycle the voltage. This will deactivate the block mode, which may remedy the error.*
- *Check all connections and switches for the indicated inhibit signals.*
Troubleshooting R-net

3.7 Joystick Calibration Error
This occurs when joystick calibration has been unsuccessful.

- Go to OBP mode and recalibrate.

If the error persists, the joystick module may be defective. Read more in section 5.

3.8 Latched Timeout
This occurs when the control system detects that the programmed block time has been exceeded. This can, for example, be due to the signal units (joystick, main steering device, suction and blowing device, etc.) not having been used frequently enough.

The error reference provides information on why the control system has left block mode.

- Cycle the voltage.
- Activate block mode.

If the error persists after the checks listed above, the signal unit may be defective. Read more in section 5.

3.9 Brake Lamp Short
This occurs when the control system detects a short circuit in the brake lamp electrical circuit. Read more about connectors in section 2.3.

- Check the brake lamps, their cables and the connections to the control system.

3.10 Lamp Short
This occurs when the control system detects a short circuit in the electrical circuit of one of the lamps.

- 7205 - Short circuit left-hand lamp.
- 7209 - Short circuit right-hand lamp

- Check the lamps, their cables and the connections to the control system.

3.11 Indicator Lamp Short
This occurs when the control system detects a short circuit in the electrical circuit of one of the indicators.

- 7206 - Short circuit left indicator.
- 720A - Short circuit right indicator.

- Check the indicators, their cables and the connections to the control system.

3.12 Indicator Lamp Failed
This occurs when the control system detects an error in the electrical circuit of one of the indicators. This usually means the indicator needs replacing.

- 7207 - Error in left indicator.
- 7208 - Error in right indicator.

- Check the indicators, their cables and the connections to the control system.
Troubleshooting R-net

3.13 DIME Error
This occurs when the control system detects an ID conflict between two modules in the system.

If a new module has been added:
- Disconnect the new module and cycle the voltage.
- If no error occurs, connect the new module to the system and cycle the voltage.
- If the error recurs, the new module must be the cause of the problem.

If no new modules have been added:
- Disconnect one module at a time and cycle the voltage.

If the error persists after the checks listed above have been performed, consult your service contact or Permobil.

3.14 Memory Error
This is a non-specific memory error that may be caused by any of the system modules.
- Check all cables and connections.
- Cycle the voltage.

If the error persists and the system includes third-party modules:
- Disconnect all modules that do not come from PGDT and cycle the voltage.

If this has dealt with the error:
- Connect one third-party module at a time and cycle the voltage each time.
- If the error recurs after one of the voltage cycles, the last module to be connected must be defective.

If the error persists after the checks listed above, the power module may be defective. Read more in section 5.

3.15 PM Memory Error
This is a specific error in the power module.
- Check all cables and connections.
- Reprogram the control system with the help of R-net’s PC programmers.

This should be done with either the latest specific program file for the wheelchair or Permobil’s original program file.

If the error persists after the checks listed above, the power unit may be defective. Read more in section 5.

⚠️ CAUTION!

Programming should only be performed by persons with sound knowledge of control systems from PGDT. Incorrect programming can mean that the wheelchair is not safe to use. Permobil cannot be held responsible for losses of any kind if the control system factory settings are altered by programming.
Troubleshooting R-net

3.16 Bad Cable
This occurs when the control system detects a connection error in the communication cables between the modules.

• Check all cables and connections to ensure there is no stoppage.
• Replace any cables with visible damage. Then cycle the voltage.
• Disconnect one cable at a time from the system and cycle the voltage after each disconnection.

If the error persists after the checks listed above, the power unit may be defective. Read more in section 5.

3.17 Bad Settings
This occurs when the control system detects incorrect or invalid program settings.

• Check all parameter settings and then reprogram the control system with the help of R-net’s PC programmers.
• Make a note of the current parameter settings and then reset the control system to the standard settings.
• Reprogram the required settings in small groups and cycle the voltage after each group to see if the error recurs.

If the error persists after the checks listed above, the power unit may be defective. Read more in section 5.

3.28 Module Error
This occurs when the control system detects an error in a specific module. The module is displayed on the diagnostics screen according to the description in section 2.

• Check all cables and connections.
• Cycle the voltage.

If the error persists after the checks listed above, the module specified may be defective. Read more in section 5.
Troubleshooting R-net

3.19 System Error
This occurs when the control system detects an error that cannot be ascribed to a specific module.

- Check all cables and connections.
- Cycle the voltage.

If the error persists and the system includes third-party modules:

- Disconnect all modules that do not come from PGDT and cycle the voltage.

If this has dealt with the error:

- Connect one third-party module at a time and cycle the voltage each time.
- If the error recurs after one of the voltage cycles, the last module to be connected must be defective.

If the error persists after the checks listed above, the system from PGDT may be defective. Read more in section 5.

3.20 Gone to Sleep (energy saving mode)
This occurs when the system has not been used for a period that exceeds the Sleep Timer parameter used for setting the energy saving mode. Each time this occurs it is registered in the system log.

3.21 Charging
This occurs when the control system detects that a charger has been connected to either inhibit contact 1 or inhibit contact 3. Read more about connectors in section 2.3.

The screen for battery charging is displayed when a charger is connected.

Each time this occurs it is registered in the system log.

When using an integral charger:

- Disconnect the charger from the mains.

When using an external charger:

- Disconnect the charger from the power wheelchair.

If the error persists after the charger has been disconnected, the joystick module may be defective. Read more in section 5.
Troubleshooting R-net

4. Basic test

After a repair has been completed, the following test should be performed. These are minimum recommendations. Depending on what the original error source was, further tests may be necessary.

⚠️ WARNING!

The tests described are minimum recommendations. It is the responsibility of the repair engineer(s) to perform other tests on the basis of the original error source and the wheelchair model. The necessary information on other tests is available in the wheelchair service manual. Permobil cannot be held responsible for losses of any kind that may arise when these tests are conducted, or that arise as a consequence of further relevant tests not being conducted.

⚠️ WARNING!

These tests should be conducted in an open space, and some kind of clamping device, such as a safety belt, should always be used. Permobil cannot be held responsible for losses for any kind arising due to these recommendations not being observed.

4.1 Basic inspection

Check that all contacts are properly connected.

- Check all cables and contacts to ensure there is no visible damage.
- Check that the rubber gaiter around the base of the joystick is not damaged. Inspect the gaiter visually. It should not be subjected to manual handling.
- Ensure that all components of the control system are securely installed.
- Do not over-tighten the mounting screws.
Troubleshooting R-net

4.2 Brake test
These tests should be carried out on an even surface with at least one meter of free space around the wheelchair.

- Switch on the control system.
- Check that the screen remains on after start-up.
- Bring the joystick slowly forwards until you hear the parking brakes functioning. In some cases the wheelchair may begin to move.
- Release the joystick immediately. You must hear both parking brakes functioning within 2 seconds.
- Repeat the test three times, bringing the joystick slowly backwards, to the left and to the right.

4.3 Test run
Set the highest permitted speed to the lowest value and run the wheelchair in all directions while checking that it runs smoothly and is easy to maneuver.

Repeat the test with the speed control set to the highest possible value.

4.4 Gradient test

⚠️ WARNING!
When this test is conducted, an additional person must be present in order to prevent the wheelchair tipping over backwards.

Run the wheelchair forwards up its steepest permitted gradient. Release the joystick when the wheelchair is on the upward slope and check that the wheelchair stops and that the brakes function as they should without the front wheels lifting from the ground.

Bring the joystick forwards and continue to run up the slope. Check that the wheelchair moves gently forwards.

Stop the wheelchair and reverse down the slope. Release the joystick when the wheelchair is on the upward slope and check that the wheelchair stops and that the brakes function as they should without the front wheels lifting from the ground.
Troubleshooting R-net

4.5 Test of lights, indicators and warning lights
If the wheelchair is equipped with lights:

- Check that all bulbs light up as they should.
- Check that all bulbs light up as they should and that the flashing frequency is 1.5 Hz ± 0.5 Hz.
- Remove the bulbs in turn and check that the remaining bulb on the same side flashes at a frequency of 3 Hz ± 0.5 Hz.

If the wheelchair is equipped with warning lights:

- Check that all bulbs light up as they should and that the flashing frequency is 1.5 Hz ± 0.5 Hz.

4.6 Test of adjustment device
If the wheelchair is equipped with an adjustment device:

- Check that all motors move in the right direction.
- Make sure that the mechanical end stops are secured and that they stop the adjustment device motors, and thus use the automatic end stop tracking that is in the seat and light module (ISM).

4.7 Test of inhibit signal
Connect a suitable battery charger or equivalent inhibit connecting device in the charging contact on the joystick module and check that the wheelchair is prevented from running.

If inhibit contacts 2, 3, 4 and 5 are used for inhibiting or speed restriction, an appropriate test should be performed in order to check that they are functioning as they should.

5. Repairing defective units
Apart from specific OEM-approved spare parts (contact Permobil for further information on these), there are no replaceable parts in the R-net control system. Consequently, defective units must be sent to Permobil or a Permobil-approved repairer for repair.

⚠️ CAUTION!
If any part is replaced without Permobil’s approval, the control system’s warranty lapses.

⚠️ CAUTION!
Permobil cannot be held responsible for losses of any kind arising as a result of a component of the R-net control system being opened, adjusted or modified without permission.
Troubleshooting R-net

R-net diagnostics
When an error or a fault occurs in the wheelchair’s electronics, information on it is displayed in the control panel’s display. This information can then be used to diagnose where the error/fault occurred and its cause.

Troubleshooting and repairs must always be performed by competent personnel with good knowledge of the wheelchair’s electronics. More information on troubleshooting and remedies can be found in the service manual for this wheelchair model.

Diagnostic screens
Current diagnostic screen
When the control system’s integrated protection circuits have been triggered so that the control system can no longer operate the wheelchair, a diagnostic screen is displayed in the control panel’s display.

This indicates a system fault, i.e. R-net has detected a problem somewhere in the wheelchair’s electrical system.

CAUTION! If the fault is in a module that is not currently being used, it may still be possible to drive the wheelchair, but the diagnostic screen is displayed occasionally.

Switch off the wheelchair and leave it off for a few minutes. Then restart the wheelchair. If the fault persists, you must switch off the wheelchair and get in touch with your service contact. Write down the information displayed in plain text in the control panel’s display and pass it on to your service contact.

Do not use the wheelchair until the problem has been remedied or you have received other instructions from your service contact.

⚠️ WARNING!
Diagnostics should only be performed by persons with sound knowledge of the wheelchair’s electronic control system. Incorrect or poorly performed repair works may make it dangerous to use the wheelchair. Permobil cannot be held responsible for any personal injury or damage to the wheelchair and its surroundings that occurs on account of incorrect or poorly performed repair work.
Troubleshooting R-net
Example of a screen showing a system fault

Identified module
This indicates the control system module that detected the problem.

PM = Power module
JSM = Joystick module

Error message
The error message provides a brief description of the error type.

Error code
The four-digit code indicates which protection circuit has been triggered.

Repair of defective units
Apart from specific OEM-approved spare parts (contact Permobil for further information on these), there are no replaceable parts in the R-net control system. Consequently, defective units must be sent to Permobil or a Permobil-approved repairer for repair.

CAUTION!
If any part is replaced without Permobil's approval, the wheelchair's warranty lapses. Permobil cannot be held responsible for losses of any kind arising as a result of a component of the R-net control system being opened, adjusted or modified without permission.
