Power Wheelchair

Produced and published by Permobil AB, Sweden
Edition: 5. 2011-11
Order no. 205232-US-0
Important Information about this Owner’s Manual

We congratulate you on your choice of power wheelchair. Our goal is for you to continue to feel satisfied with your choice of both vendor and wheelchair.

Before you begin using your wheelchair, it is important that you read and understand the content of these operating instructions and in particular the Safety Instructions.

These operating instructions are primarily intended to acquaint you with the functions and characteristics of the wheelchair and how you can use them in the best manner possible. They also contain important safety and maintenance information, as well as describing possible problems that can arise while driving the wheelchair.

Always keep these operating instructions handy in connection with your wheelchair, since the need for important information can arise concerning its use, safety and maintenance.

It is also possible to obtain information concerning our products from our home page on the Internet. You can find us at www.permobil.com.

All information, pictures, illustrations and specifications are based upon the product information that was available at the time that these operating instructions were printed. Pictures and illustrations that are found in these operating instructions are representative examples and not intended to be exact depictions of the various parts of the wheelchair.

We reserve the right to make changes to the product without prior notice.

Ordering of Documentation

If you are in need of another copy of the Owner’s Manual, it can be ordered from Permobil, ask for item No. 205232-US-0.
**TECHNICAL SUPPORT**

In the event of technical problems, you should contact your dealer or Permobil Inc USA at 1-800-736-0925.

Always state the chassis serial number when contacting Permobil to ensure that the correct information is provided.

**SPARE PARTS & ACCESSORIES**

Spare parts and accessories must be ordered through your dealer.

**SCRAPPING THE WHEELCHAIR**

Contact Permobil Inc. for information about scrapping agreements in force.

**WARRANTY**

A warranty registration card is attached to each new wheelchair. The Permobil Inc. Product Warranty Information sets forth the conditions of the warranty.

Contact your dealer or Permobil Inc USA for information about the warranty period for this wheelchair.
Safety Instructions - General

An electric wheelchair is a motorized vehicle and special care must therefore be taken when it is used. Please read and follow all instructions and warnings in this manual before operating your Permobil powered wheelchair. Incorrect use may both injure the user and damage the chair. In order to reduce these risks, you should read the Owner’s Manual carefully, in particular the safety instructions and their warning texts.

Throughout this manual the following symbol will be used to note items that have significant importance to safety concerns:

⚠️ CAUTION
Please use caution where this symbol appears.

⚠️ WARNING
Please use extreme caution where this warning symbol appears. Failure to observe warnings can lead to personal injury and property damage, including damage to the wheelchair.

Permobil is not responsible for personal injuries or property damage resulting from any person’s failure to follow the warnings and instructions in this manual. Permobil is not responsible for injuries or damage resulting from failure to exercise good judgment.

The final selection and purchasing decision about the type of electric wheelchair to be used is the responsibility of the wheelchair user and his or her healthcare professional. Permobil Inc. is not responsible for inappropriate selections of wheelchair models or features or improper fitting of the wheelchair.
Safety Instructions - General

Your wheelchair was configured specifically for your needs as prescribed by your healthcare provider. Consult your healthcare provider before changing the seat position or making any other adjustment. Some adjustments may reduce your wheelchair’s performance or safety or may not be appropriate for your needs.

It is also of the utmost importance that you devote sufficient time to become acquainted with the different buttons, the function and steering controls, the different adjustment possibilities of the seat, etc. of your wheelchair and its accessories before you begin using it.

_Do not undertake your own first test drive without making sure that you have assistance in the immediate vicinity if you should need help._

In order to make sure that nothing happened to the wheelchair while it was being shipped to you, you should check the following items before beginning to use it:

• that all products ordered are included in the delivery, including operating instructions and possible other documentation. If you suspect that something is missing, then contact your supplier or Permobil for more information as soon as possible.

• that no transport-related or other damages have occurred to the wheelchair and its accessories. If you discover that something has been damaged or in some other manner appears to be incorrect, then contact your supplier or Permobil for more information as soon as possible before you continue the checks.

We recommend that you charge your wheelchair’s batteries before you begin using it. The chapter titled “Charging the Batteries” describes how to do this.

Always be sure that tires are inflated properly before driving.

_If you experience that the wheelchair in any manner is not behaving as expected or if you suspect that something is wrong: abort the test drive as soon as possible, shut off the wheelchair and get in touch with your service contact or Permobil for more information._
Safety Instructions

⚠️ WARNING

Operation
Permobil recommends the use of wheelchair lights at all times user is riding near public rights of way. Use extreme caution when driving near unprotected ledges, drop-offs or on elevated surfaces. Unintended movement or excessive speed in these areas can lead to personal injury or property damage.

Do not drive the wheelchair over any curbs or edges higher than 2.5 inches. When driving over a curb or similarly elevated surface, you must cross the surface at a 90 degree angle (perpendicular). Crossing such surfaces at any other angle may result in the wheelchair tipping.

Reduce your speed when driving on uneven terrain or soft surfaces. Do not use your wheelchair on stairs or escalators. Always use an elevator.

Do not lift or move the wheelchair by any of its removable parts. Doing so could lead to personal injury and property damage, including damage to the wheelchair.

⚠️ CAUTION

Operation
Do not let children drive the wheelchair without supervision. Do not drive the wheelchair on public streets or roadways. Obey all local pedestrian rules and be aware that vehicle drivers may have difficulty seeing you.

Do not operate your wheelchair under the influence of alcohol. Consumption of alcohol may impair your ability to operate your wheelchair safely.

Some physical limitations or use of medication, either prescribed or over-the-counter, may limit your ability to operate your wheelchair safely. Be sure to consult with your physician about your physical limitations and medications.
Safety Instructions

⚠️ WARNING

Modifications
Any unauthorized modifications to the wheelchair or its various systems may increase the risk of personal injury and property damage, including damage to the wheelchair.

All modifications to and interventions in the vital systems of the wheelchair must be performed by a qualified service technician authorized by Permobil to perform such service on Permobil products.

Weight Limitations
The maximum user weight for your Permobil is set forth in the specification section of the supplied Owner’s Manual for current seat model. Operation of the wheelchair by users who exceed the maximum allowable user weight can lead to personal injury and property damage, including damage to the wheelchair, as well as voiding any applicable warranty to the wheelchair.

Do not carry passengers on the wheelchair. Doing so can lead to personal injury and property damage, including damage to the wheelchair.

Positioning Belts
Always wear your positioning belt while in your wheelchair. If signs of damage or wear appear, replace the positioning belt immediately through your Permobil dealer.

⚠️ CAUTION

Prior to Riding
In some instances, including where certain medical conditions exist, users should practice operating their wheelchair under the supervision of an assistant who is familiar with the operation of the wheelchair and with the abilities and limitations of the user.
Safety Instructions

CAUTION

Operation - Inclines
When driving downhill, select the slowest speed and proceed with caution. Driving down an incline in a front wheel drive wheelchair can shift the user’s center of gravity forward. If the wheelchair rolls faster than you would like, stop the wheelchair by releasing the joystick and begin descending again at a slower speed.

Avoid sudden stops or starts. Stop by releasing joystick rather than by turning the power off. Turning off power while the wheelchair is in motion will cause the wheelchair to stop suddenly.

When driving up an incline, try to keep moving at a steady speed. Stopping and starting the chair while moving up an incline makes the wheelchair more difficult to control.

Do not drive up or down slopes with a gradient greater than indicated in the technical specifications section of the manual. There is a risk that the wheelchair will not maneuver safely.
Safety Instructions

⚠️ WARNING

Operation - Inclines
Do not drive the wheelchair where the sideways gradient is more than indicated in the technical specifications section of the manual. There is a risk of tipping over.

Do not drive up or down ramps that are not equipped with proper edge protection along the sides of the ramp to prevent the wheelchair from falling off of the ramp.

When driving up an incline, be sure to drive your wheelchair straight up the incline (perpendicular). Driving at an angle up an incline increases the risk of tipping or falling. Use extreme caution when driving up an incline.

Do not drive down or up a hazardous incline, such as a surface covered with snow, ice, or wet leaves or a surface that is uneven. Also avoid driving on ramps that do not have proper edge protection.
Safety Instructions

⚠️ WARNING

Operation - Turning
Turning your wheelchair at high speeds can create the possibility of the wheelchair tipping and personal injury. The possibility of tipping can be increased by high turning speed, sharp turns, uneven surfaces, abrupt changes in direction, and driving from an area of low traction (e.g. lawn) to an area of high traction (e.g. sidewalk).

To protect against tipping, personal injury and property damage, reduce speed and reduce the sharpness of your turn when turning.

Operation - Freewheel Mode
In order to prevent the wheelchair from rolling away, ensure that the wheelchair is on a level and dry surface before releasing the brakes.

In order to avoid personal injury do not use your Permobil in freewheel mode without an attendant present. Do not attempt to put the wheelchair in freewheel mode by yourself while seated in it.

Do not put the wheelchair in freewheel mode while on an incline. This could cause the wheelchair to roll on its own, causing injury and property damage, including damage to the wheelchair.
Safety Instructions

Driving on a Loose or Soft Surface
When the wheelchair is set to its lowest speed and the batteries are not fully charged, driving on certain surfaces, for example gravel, sand or thick carpeting, can involve constrained navigability.

Driving in Darkness
Driving in the dark may only be done if your wheelchair is equipped with functioning lighting in the front and the back, or as per the applicable national or local traffic regulations.

Driving in Extreme Climate Conditions
Permobil’s wheelchairs are designed to withstand most adverse weather conditions, however to minimize the risk of being caught in difficult situations you should avoid using the wheelchair outdoors during, for example, severe cold, heavy rain or thick snow.

Also bear in mind that certain surfaces on the wheelchair can be heated up or cooled down in the event of prolonged exposure to intense sunlight or cold respectively.

CAUTION
Safety Instructions

⚠️ WARNING

Driving with Seat Lift/Seat Tilt/Backrest Recline
Be careful in making sure that nothing gets stuck between the chassis and the seat when the seat lift/seat tilt is operated. Operating the seat lift, seat tilt/ backrest recline changes the center of gravity and increases the risk of tipping over. Always drive in low speed and only use those seat functions on level ground, and not on hills, ramps, slopes or other inclines. Using those seat functions while driving on inclines can lead to personal injury and property damage, including damage to the wheelchair.

Center of Balance
The possibility of this wheelchair tipping and the point where this wheelchair will tip forward, back or to the side depends on its center of balance. Please note that the following factors can affect the wheelchair’s center of balance:

• Elevation of the seat
• Height and angle of the seat/backrest
• Body position or weight distribution
• Driving on an incline such as a ramp or a hill
• Use of a backpack or other accessories, depending on the amount of weight added.

If your wheelchair begins to move in an unexpected manner, immediately release the joystick to stop the wheelchair. Except in an emergency, do NOT use the on/off button to stop your wheelchair. This will cause the wheelchair to stop abruptly and may cause personal injury.

Fixed Seat Post
Adjusting the seat height may only be performed by an authorized service provider. See the Service Manual for more information.
Safety Instructions

⚠️ WARNING

Support Wheels
If your wheelchair is equipped with support wheels, they must always be mounted when the wheelchair is being driven.

Transfer into and out of the chair
Be sure that the power is turned OFF before entering or leaving the wheelchair and before lifting the control side armrest.

When transferring into or out of the wheelchair, every precaution should be taken to reduce the distance between the wheelchair and the place to which the user is transferring. Overextending this distance can cause user to over-exert, lose balance, or fall.

Permobil recommends that users transfer in the presence of or with the assistance of an attendant.

Use caution when bending or reaching.

Never use the joystick as a handhold or point of support.

Do not use foot plates or armrests as supports when transferring into or out of the wheelchair. The footplates and armrests are not designed to be weight-bearing structures. Excessive force may cause them to give way, resulting in personal injury or property damage, including damage to the wheelchair.
Safety Instructions

⚠ WARNING

Passengers
The wheelchair is not intended to transport passengers, regardless of the age of the passenger. The Maximum User Weight stated in the Owner’s Manual for your seating includes the user and any personal effects. The Maximum limit should not be exceeded. The wheelchair’s maneuverability and stability can be degraded as a result.

Environmental Conditions
Protect your wheelchair from exposure to any type of moisture, including rain, snow, or wash. Exposure to moisture can caused the chair to short-circuit, catch fire and cause personal injury or property damage. Do not operate your wheelchair if it has been exposed to moisture until it has dried completely.

If any of the shrouds or the joystick boot has cracks or tears, they must be replaced immediately. Failure to do so can allow moisture to enter the electronics and cause personal injury or property damage, including fire.

Do not operate your wheelchair in icy or slippery conditions. These conditions can lower the performance and safety of your wheelchair which could lead to an accident, personal injury and property damage, including damage to the wheelchair.

NOTE: Extreme care should be exercised when using oxygen in close proximity to electric circuits and other combustible materials. Contact your oxygen supplier for instruction in use of oxygen.
Safety Instructions

⚠️ WARNING

Transport
The wheelchair must be transported in or with transport solutions that have been approved for this purpose.

Check that the wheelchair is properly secured and that the wheel locks are not disengaged. The wheelchair can be locked into position by running fastening straps through the brackets at the front and back. Also check that the fastening points on the transport vehicle are well-anchored.

A defectively fastened chair can cause serious injury to persons in the vehicle and serious damage to the vehicle.

Use Prohibited in Motor Vehicles
Currently, the Department of Transportation has not approved any tie-down or restraint system in a moving vehicle of any type to transport a person while seated in a wheelchair.

Permobil recommends that users NOT be transported in any kind of vehicle while in their wheelchair. The only safe alternative is that users be transferred into factory vehicle seating for transportation and use safety restraints made available by the auto industry. Permobil does not recommend any wheelchair transportation systems.

Never sit in your wheelchair while in a moving vehicle. In an accident or sudden stop you may be thrown from the chair and seriously injured or killed.

Permobil positioning belts are designed to position the user only and not to protect you in the event of a motor vehicle accident. The positioning belts do not replace use of a vehicle mounted restraint.
Safety Instructions

**WARNING**

**Maintenance and Service**

Carry out only the service and maintenance which are stated in the Owner’s Manual. All other service and maintenance must be performed by a qualified service technician authorized by Permobil to perform such service on Permobil products.

During all work on the electrical system of the wheelchair, the Circuit Breaker must always be in OFF position. To avoid the risk of electric shock, use extreme caution when using metal objects while working on the batteries. Short-circuiting can easily cause an explosion. Never perform service on the wheelchair without using protective gloves and goggles. Failure to do so can lead to personal injury.

Do not use parts or accessories not authorized by Permobil. Use of unapproved "aftermarket" accessories and parts may cause changes in the wheelchair, which may make the wheelchair unstable or uncontrollable. Such use may also void the warranty on the wheelchair.

Connecting any unapproved electrical or electronic devices to the wheelchair’s electrical system can cause damage to the chair and caused the chair to become uncontrollable or drive erratically. Such use may also void the warranty.

The wheelchair is heavy and contains many moving parts, which means that the risk of being caught between them is always present.

**Charging of Batteries**

Charging must be done in a well-ventilated room, not in a wardrobe or closet. Charging must not be done in a bathroom or wet room. Only chargers with a max 10 A charging current (average value) may be used (the RMS value of the charging current must not exceed 12A). When the charger is connected, the chair must not and cannot be driven.
Safety Instructions

⚠️ WARNING

**Safety Circuits**
Permobil products are equipped with safety circuits. Inhibit circuits prevent the wheelchair from driving under certain conditions. Speed reduction circuits limit the wheelchair’s maximum speed under certain conditions. Limit switch circuits limit the wheelchair’s functions under certain circumstances. Overload protection circuits shut the wheelchair off in case of an overload. The user should stop using the wheelchair immediately and consult an authorized Permobil distributor if any of these circuits should become disabled.

Any attempt to modify the safety circuits will result in unsafe operation of the wheelchair and could cause the chair to become unstable or uncontrollable. Such modifications may also void the wheelchair’s warranty.

**Changing Batteries and Fuses**
The Circuit Breaker must always be in OFF-position when batteries and fuses are replaced.

Observe care in the use of metallic objects when working with batteries. A short-circuit can easily cause an explosion. Always use protective gloves and protective eye-glasses.

**Filling Air into tires**
Check at regular intervals that the wheelchair’s tires have the prescribed tire pressure. Incorrect tire pressure can cause deteriorating stability and maneuverability.

The prescribed tire pressure is 36 psi (250 kPa).

Note that overfilling causes a risk of explosion.
Safety Instructions

⚠️ WARNING

Changing Tires
Avoid the use of sharp-edged tools when working with tires.
If the wheel bolt is removed for tire service, replace it with a new, unused part from Permobil and tighten the bolt to the recommended torque. Also, inspect the drive axle and wheel rim for any damage. Damage to either part can cause the wheel bolt to loosen or fracture. Permobil recommends that wheel bolts be used only one time.

Storage
The wheelchair and its accessories must always be shut off when they are not being used. Always store the wheelchair so that access for unauthorized individuals is avoided.

Never store the wheelchair in a room in which condensation can arise (mist or dampness on the surfaces) e.g. in pool areas, laundry rooms, or similar rooms.

If you are unsure as to how your wheelchair and its accessories should be properly stored, contact your supplier or Permobil for more information.

Damages/malfunctions on the wheelchair and its accessories
If you experience that the wheelchair in any manner is not behaving as expected or if you suspect that something is wrong: Stop driving as soon as possible, shut off the wheelchair and contact your service contact or Permobil for more information.

It’s also of greatest importance that Permobil be informed if the wheelchair and its accessories have been subjected to transport damages, damages during driving or damages due to another cause as soon as possible after the event. There exists a risk that the wheelchair and its accessories can no longer be used in a safe and secure manner.
Safety Instructions

Recycling of Batteries
Used or broken drive batteries should be taken care of in an environmentally correct manner in accordance with locally applicable recycling directions.

EMC Requirements
The electronics of an electrical wheelchair can be affected by external electromagnetic fields (for example from mobile telephones). Similarly, the electronics of the wheelchair itself can also emit electromagnetic fields that can affect the immediate surroundings (for example certain alarm systems in businesses).

The limit values for Electromagnetic Compatibility (EMC) with respect to electrical wheelchairs is set in the harmonized standards for the EU in the Medical Devices Directive, No. 93/42/EEC.

Permobil’s electronic wheelchair’s comply with these limit values.

Also see Important Information about Electromagnetic Interference (EMI) on page 70-71.
Design and function

General
The Street is an electrical rear wheel drive wheelchair for outdoor and indoor driving intended for persons with functional impairments.

The wheelchair consists of a chassis and a seat. The chassis contains the wheelchair's electronics, power supply and drive functions. The seat consists of the seat frame, seat plate/back rest, arm rest/leg rest, seat lift and possible accessories and additional options such as a head support, calf rest, chest support, etc. The Street can be combined with different seat models, which are supplied with separate operating instructions.

In these operating instructions, we have chosen to show the wheelchair with our Corpus-seat. The management of the chassis and most of its functions are, however, the same regardless of which seat model is selected.

Overview

1. Head Support (accessories)  
2. Back Rest  
3. Control Panel  
4. Seat  
5. Leg Support  
6. Foot Plate  
7. Front Wheel  
8. Rear Wheel (drive wheel)  
9. Chassis  
10. Arm Rest
Driving
The Street has rear wheel drive and is equipped with a drive package for each drive wheel. The drive package consists of an electric motor with a drive gear and magnetic wheel lock.

Shock absorber
The wheelchair is equipped with four shock absorbers with an adjustable spring force. If no specific user weight is given when the wheelchair is delivered, the shock absorbers will be set to a default value corresponding to a user weight of 110 - 155 lbs.

Adjustment of the spring force
Adjustment ought to be performed by personnel who are well-acquainted with the design and functionality of the shock absorbers. When adjustment is needed, contact your nearest service provider or service center, or Permobil service.
Wheels
The wheelchair’s rear wheels, the drive wheels, have air-filled tires. The front wheels, the guide wheels, can either be air-filled or solid rubber tires. The guide wheels are available in two sizes.

Lights and reflectors
In the standard version the wheelchair is equipped with reflectors in the front and back as well as on the sides. Front/back lights and turn indicators are optional.
Electronics
The wheelchair’s batteries are located under the front and rear covers of chassis respectively. Both of the batteries are easily accessible for maintenance and battery replacement.

Main fuse/Charging fuse/Charging outlet
The main fuse is located in an outlet in the front of the rear chassis cover.

The charging fuse is located on the front edge of the front chassis cover, under the wheel lock release lever.

The charging outlet is located on the left side of the front chassis cover.
Seat
Permobil Street can be combined with different seat models, which are supplied with a separate user manual. The seat’s electrical functions are operated using the control panel or the seat’s ICS control panel (if your wheelchair is so equipped). For safety reasons, the seat’s electrical functions may in certain situations restrict the usage of other seat functions or the wheelchair’s maximum speed. In certain situations a seat function may even prevent the wheelchair from moving.

Seat lift
Permobil Street can be fitted with an electrically controlled seat lift that allows the seat to be raised steplessly up to 10 inches in order to adjust its height to tables, benches, etc.

Seat angle
Permobil Street can be fitted with an electrically controlled seat angle function that makes it possible to adjust the seat angle steplessly up to 45°.
NOTE! The following applies only if your wheelchair is equipped with separate foot plates.

With the wheelchair kept still and having the leg supports driven towards its innermost position, the wheelchair’s front wheels must always be kept in a 90 degrees straight position, (A), pointed forward or backwards. With the front wheels pointed sideways, (B), there is a risk that the leg rest with foot plates might be damaged if they are hit against the front wheels.

There is also a risk for the user to get caught between the foot plates and wheels.

A. Correct angle front wheels  
B. Incorrect angle front wheels
R-Net control panel LCD monochrome display

General
The Control Panel consists of a joystick, function buttons and a display. At the front of the panel is the Charger Socket. Two Jack Sockets are located on the bottom of the panel.

Your wheelchair may also be equipped with a Seat Control Panel in addition to the control panel.
R-Net control panel LCD monochrome display

**Charger Socket**
This socket should only be used for charging or locking the wheelchair. Do not connect any type of programming cable into this socket. This socket should not be used as a power supply for any other electrical device. Connection of other electrical devices may damage the control system or affect the E.M.C. performance of the wheelchair.

---

**WARNING**
The wheelchair’s warranty will be voided if any device other than a battery charger supplied with the wheelchair, or the lock key is connected into the control panels charger socket.
R-Net control panel LCD monochrome display

Function keys
There are a total of 10 function keys on the control panel.

* Applies only if the wheelchair is fitted with lights.

**On/off key**
The on/off key is the switch for the control system’s electronics which, in turn, supply power to the wheelchair’s motors.

**WARNING**
Do not use the on/off key to stop the wheelchair, except in an emergency. You can be thrown out of the chair or reduce the life of the wheelchair’s drive system.

**Horn**
Press the switch to produce a signal to attract attention.

**Max. speed**
These keys normally reduce or increase the wheelchair’s maximum speed. Depending on how the control system has been programmed, a temporary screen may be displayed when this key is pressed.
R-Net control panel LCD monochrome display

Mode
The user can use the Mode key to scroll between the control system’s available modes. The available modes depend on the programming and on which other output devices are connected to the control system.

Profile
The user can use the Profile key to scroll between the control system’s available profiles. The number of available profiles depends on how the control system has been programmed. Depending on how the control system has been programmed, a temporary screen may be displayed when this key is pressed.

Hazard lights*
This key activates and deactivates the wheelchair’s hazard lights. Hazard lights are used when the wheelchair is stationary in a position which may represent a risk or an obstacle for others. Press this key to activate the hazard lights. Press it again to deactivate them. When the hazard lights are active, the indicator lamp next to the control key flashes in time with all the indicators on the wheelchair.

Lights*
This key activates and deactivates the wheelchair’s lights. Press this key to switch the lights on. Press it again to switch them off. When the lights are activated, the indicator lamp next to the control key is also switched on.

Indicators, left*
This key activates and deactivates the wheelchair’s left indicators. Press this key to activate the indicators. Press it again to deactivate them. When the indicators are active, the indicator lamp next to the control key flashes in time with the left indicators on the wheelchair.

Indicators, right*
This key activates and deactivates the wheelchair’s right indicators. Press this key to activate the indicators. Press it again to deactivate them. When the indicators are active, the indicator lamp next to the control key flashes in time with the right indicators on the wheelchair.

* Applies only if the wheelchair is fitted with lights.
R-Net control panel LCD monochrome display

**Socket for external on/off key**
You can use this socket to activate and deactivate the control system with an external device.

**Socket for external profile key** (applies if profiles are programmed and used).
You can use this socket to select a profile with an external device.
R-Net control panel LCD monochrome display

Display
By looking at the control panel display, you can get an idea of the status of the control system. The control system is active when the screen is lit.

Symbols
R-net’s display has symbols that are always displayed and symbols that are only displayed under certain conditions. Below is the typical appearance of the display when driving with profile 1.

Battery indicator
The battery indicator displays the status of the battery.

**Constantly on**  
This shows that everything is working correctly.

**Flashing slowly**  
The control system is working correctly but the battery needs to be charged as soon as possible.

**Moving**  
The wheelchair’s batteries are being charged. The wheelchair cannot be driven until the charger has been disconnected and the control system has been restarted.
R-Net control panel LCD monochrome display

Speed Indicator

This displays the current speed setting. The speed setting is adjusted using the Speed Buttons.

Current Profile

The Profile Number describes which Profile the control system is currently operating in. The Profile Text is the name or description of the Profile the control system is currently operating in.

In Focus

When the control system contains more than one method of direct control, such as a secondary Joystick Module or a Dual Attendant Module, then the Module that has control of the wheelchair will display the In Focus symbol.

Speed Limit

If the speed of the wheelchair is being limited; for example, by a raised seat, then this symbol will be displayed. If the wheelchair is being inhibited from driving, then the symbol will flash.

Restart

When the control system requires a restart; for example, after a module re-configuration, this symbol will be flashed.
R-Net control panel LCD monochrome display

Fault
The control system can detect a wide variety of errors. When the system has detected an error that is not severe enough to cause the system to trip, then this symbol will be displayed.

Motor Temperature
This symbol is displayed when the control system has intentionally reduced the power to the motors, in order to protect them against heat damage.

Control system Temperature
This symbol is displayed when the control system has intentionally reduced its own power, in order to protect itself against heat damage.

Timer
This symbol is displayed when the control system is changing between different states. An example would be entering into Programming Mode. The symbol is animated so that you can see the sand running through the hourglass.

E-Stop
If the control system is programmed for latched operation, then it is normal for an Emergency Stop Switch to be connected into the External Profile Switch Jack. If the Emergency Stop Switch is operated or disconnected, this symbol will flash.
R-Net control panel LCD color display

General
The Control Panel consists of a joystick, function buttons and a display. At the front of the panel is the Charger Socket. Two Jack Sockets are located on the bottom of the panel.

Your wheelchair may also be equipped with a Seat Control Panel in addition to the control panel.
R-Net control panel LCD color display

**Charger Socket**

This socket should only be used for charging or locking the wheelchair. Do not connect any type of programming cable into this socket. This socket should not be used as a power supply for any other electrical device. Connection of other electrical devices may damage the control system or affect the E.M.C. performance of the wheelchair.

---

**WARNING**

The wheelchair’s warranty will be voided if any device other than a battery charger supplied with the wheelchair, or the lock key is connected into the control panels charger socket.
R-Net control panel LCD color display

**Function Buttons**
On the control panel there are a total of 10 Function Buttons.

*) Only active if the wheelchair is equipped with lights.

**On/Off Button**
The On/Off button applies power to the control system electronics, which in turn supply power to the wheelchair’s motors.

⚠️ **WARNING**
Do not use the On/Off Button to stop the wheelchair unless there is an emergency. If you do, you may get thrown out of the chair or shorten the life of the wheelchair drive components.

**Horn Button**
The horn will sound while this button is depressed.

**Maximum Speed Buttons**
These buttons decreases/increases the wheelchair's maximum speed. Depending on the way the control system has been programmed a momentary screen may be displayed when these buttons are pressed.
R-Net control panel LCD color display

Mode Button
The Mode button allows the user to navigate through the available operating Modes for the control system. The available modes are dependant on programming and the range of auxiliary output devices connected to the control system.

Profile Button
The profile button allows the user to navigate through the available Profiles for the control system. The number of available Profiles is dependant on how the control system is programmed. Depending on the way the control system has been programmed a momentary screen may be displayed when the button is pressed.

Hazard Warning Button and LED*)
This button activates/deactivates the wheelchairs hazards lights. This function is used when the wheelchair is positioned in a way making it a obstruction for others. Push the button to activate the hazard lights and push it again to deactivate them. When activated the indicator LED will flash in sync with the wheelchair’s indicators.

Lights Button and LED*)
This button activates and deactivates the wheelchair’s lights. Depress the button to turn the lights on and depress the button again to turn them off. When activated the lights LED will illuminate.

Left Indicator Button and LED*)
This button activates and deactivates the wheelchair’s left indicator. Depress the button to turn the indicator on and depress the button again to turn it off. When activated the left indicator LED will flash in sync with the wheelchair’s indicator.

Right Indicator Button and LED*)
This button activates and de-activates the wheelchair’s right indicator. Depress the button to turn the indicator on and depress the button again to turn it off. When activated the right indicator LED will flash in sync with the wheelchair’s indicator.

*)Only active if the wheelchair is provided with lights.
R-Net control panel LCD color display

External On/Off Switch Jack
This allows the user to turn the control system on and off using an external ability switch, such as a buddy button.

External Profile/Mode Switch Jack
(This jack’s function varies depending on the programming.)
This allows the user to select Profiles using an external ability switch, such as a buddy button.
R-Net control panel LCD color display

Display
The status of the control system is shown in the display. The control system is on when the display is backlit.

Screen Symbols
The Drive screen for the R-net has common components, which will always appear, and components which will only appear under certain conditions. Below is a view of a typical Drive screen in Profile 1.

Battery Indicator
This displays the charge available in the battery and can be used to alert the user of the status of the battery.

Steady
This indicates that all is well.

Flashing Slowly
The control system is functioning correctly, but you should charge the battery as soon as possible.

Stepping Up
The wheelchair batteries are being charged. You will not be able to drive the wheelchair until the charger is disconnected and you have switched the control system off and on again.
R-Net control panel LCD color display

Speed Indicator
This displays the current speed setting. The speed setting is adjusted using the Speed Buttons.

Current Profile
The Profile Number describes which Profile the control system is currently operating in. The Profile Text is the name or description of the Profile the control system is currently operating in.

In Focus
When the control system contains more than one method of direct control, such as a secondary Joystick Module or a Dual Attendant Module, then the Module that has control of the wheelchair will display the In Focus symbol.

Speed Limit
If the speed of the wheelchair is being limited; for example, by a raised seat, then this symbol will be displayed. If the wheelchair is being inhibited from driving, then the symbol will flash.

Restart
When the control system requires a restart; for example, after a module re-configuration, this symbol will be flashed.
R-Net control panel LCD color display

Motor Temperature

This symbol is displayed when the control system has intentionally reduced the power to the motors, in order to protect them against heat damage.

Control system Temperature

This symbol is displayed when the control system has intentionally reduced its own power, in order to protect itself against heat damage.

Timer

This symbol is displayed when the control system is changing between different states. An example would be entering into Programming Mode. The symbol is animated so that you can see the sand running through the hourglass.

E-Stop

If the control system is programmed for latched operation, then it is normal for an Emergency Stop Switch to be connected into the External Profile Switch Jack. If the Emergency Stop Switch is operated or disconnected, this symbol will flash.
R-Net control panel LCD color display

Installation menu
The installation menu permits the user to set the clock, the display brightness, background color etc. Access the menu by holding down the keys for higher and lower maximum speed simultaneously. Scroll through the menu by moving the joystick up or down.

Exit the installation menu by first selecting “Exit” at the bottom of the menu and then moving the joystick to the right.

Setting the time (Set Time)
Select “Set Time” in the menu. Move the joystick to the right to go to the menu for setting the time. Then select “Year”, “Month”, “Date”, “Hours” and “Minutes” by moving the joystick left or right. Set the desired value by moving the joystick up or down. Exit the installation menu by selecting “Exit” and then moving the joystick up or down.

Displaying the time (Display Time)
Select “Display Time” in the menu. Move the joystick right or left to select 12 or 24 hour display, or “Off” to remove the clock from the display.
Control panel R-Net LCD color display

Distance measurement (Distance)
Select “Distance” in the menu. Move the joystick to the right to go to the menu for setting distance measurement. Then select “Total distance”, “Trip”, “Distance display” or “Reset” by moving the joystick up or down.

- **Total distance** (Total Distance): Shows the total distance traveled by the control system.
- **Trip** (Trip Distance): Shows the total distance traveled since the last reset.
- **Distance display** (Display Distance): Selects Trip or Total Distance in the display.
- **Reset** (Clear trip distance): Move the joystick to the right to reset the Trip measurer.
- **Exit** (Exit): Move the joystick to the right to exit the installation menu.

Brightness (Backlight)
Select “Backlight” in the menu. Move the joystick to right or left to set the desired brightness for the display backlight. Ten fixed levels are available from 10-100%.

Background (Background)
Select “Background” in the menu. Move the joystick right or left to select “Blue”, “White” or “Auto”.

- **Blue** (Blue): The display background is blue in all profiles.
- **White** (White): The display background is white in all profiles.
- **Automatic** (Auto): The display background is programmed in the various travel profiles. E.g. blue background for slow profile for indoors travel and white background for rapid profile for outdoors travel.

Diagnostics (Diagnostics)
For qualified technicians only.
R-Net control panel LED

General
The Control Panel consists of a joystick, function buttons and a display. At the front of the panel is the Charger Socket. Two Jack Sockets are located on the bottom of the panel.

Your wheelchair may also be equipped with a Seat Control Panel in addition to the control panel.

Control Panel Overview
R-Net control panel LED

Charger Socket
This socket should only be used for charging or locking the wheelchair. Do not connect any type of programming cable into this socket. This socket should not be used as a power supply for any other electrical device. Connection of other electrical devices may damage the control system or affect the E.M.C. performance of the wheelchair.

WARNING
The wheelchair’s warranty will be voided if any device other than a battery charger supplied with the wheelchair, or the lock key is connected into the control panels charger socket.
R-Net control panel LED

Function keys
There are a total of 9 function keys on the control panel with LEDs.

* Applies only if the wheelchair is fitted with lights.

On/off key
The on/off key is the switch for the control system’s electronics which, in turn, supply power to the wheelchair’s motors.

⚠️ WARNING
Do not use the on/off key to stop the wheelchair, except in an emergency. You may be thrown out of the chair, or you may shorten the life of the wheelchair’s drive system.

Horn
Pressing the switch produces a sound signal for attracting attention.

Max. speed/choice of profile
These keys normally reduce or increase the wheelchair’s maximum speed. In special applications, the keys can instead control the choice of driving profile.
R-Net control panel LED

Mode
With the Mode key the user can scroll between the control system’s available operating modes. The available modes depend on the programming and on which other output devices are connected to the control system.

Hazard lights*)
This key activates and deactivates the wheelchair’s hazard lights. Hazard lights are used when the wheelchair is stationary in a position which may represent a risk or an obstacle for others. Press this key to activate the hazard lights. Press it again to deactivate them. When the hazard lights are active, the indicator lamp next to the control key flashes in time with the wheelchair’s direction indicators.

Lights*
This key activates and deactivates the wheelchair’s lights. Press this key to switch on the lights. Press it again to switch them off. When the lights are activated, the indicator lamp next to the control key also lights up.

Indicators, left*
This key activates and deactivates the wheelchair’s left-hand direction indicators. Press the key to activate the indicators. Press it again to deactivate them. When the indicators are active, the indicator lamp next to the control key flashes in time with the wheelchair’s left-hand direction indicators.

Indicators, right*
This key activates and deactivates the wheelchair’s right-hand direction indicators. Press the key to activate the indicators. Press it again to deactivate them. When the indicators are active, the indicator lamp next to the control key flashes in time with the wheelchair’s right-hand direction indicators.

* Applies only if the wheelchair is fitted with lights.
R-Net control panel LED

Battery voltage indicator
Shows the voltage remaining in the batteries (from left to right):

- Red+Yellow+Green  = Fully charged
- Red+Yellow        = Half charged
- Red               = Charge the batteries

A good way of using this indicator is to learn how it works while you are driving. Like a fuel gage in a car, it does not show exactly how much “fuel” is left, but it gives you a rough idea so that you can avoid unnecessary stops due to discharged batteries.

The indicator shows a more exact value after approximately 1 minute of travel.

⚠️ CAUTION ⚠️

The battery voltage indicator also functions as a “fault indicator” for the wheelchair’s electronics. See page 92 for further information.
R-Net control panel LED

Max. speed indicator

*Speed*
Indicates the maximum speed set for the wheelchair.

- 1 - 2 lamps = Low speed
- 3 - 4 lamps = Average speed
- 5 lamps = Max. speed

*Driving profile*
For special applications, the wheelchair can be programmed with more than one driving profile. In this case, the indicator’s LEDs will instead display the selected driving profile. There can be up to 5 driving profiles.

⚠️ CAUTION
The indicator for max. speed/driving profile also functions as a “fault indicator” for the wheelchair’s electronics. See page 92 for further information.
R-Net control panel LED

Seat indicator
On certain seats the electrical functions for seat lift, seat angle, backrest angle and legrest angle are controlled with the control panel joystick. In this case the active seat function is indicated on the control panel seat indicator.
Operation

General
The Permobil Street is designed for use both indoors and outdoors. When you drive indoors, you must be careful in, for example, narrow passages, when going through doors and entrances and when using lifts, ramps, etc.

You should also consider the risk of crushing when you use the electric seat lift and seat angle functions, above all if the wheelchair has been driven under tables, benches, etc. Outdoors you should remember to drive very slowly down steep slopes and to be very careful when driving on uneven surfaces, up slopes, on side slopes and over obstacles. Always observe a good safety distance when driving near edges and precipices.

We recommend that you do repeated test drives in an environment in which you feel safe so that you are very familiar with how the wheelchair and its accessories behave in different situations before you start to use the wheelchair on public roads and in other public locations.

General - Driving
Check that the control panel is correctly fitted and the joystick is in the neutral position. Ensure that you have good support, for example the wheelchair’s arm rest, for the part you use to handle the joystick with. Do not just use the joystick as a support. Fast turns and driving on uneven surfaces can interfere with your ability to handle the wheelchair safely.

1. Switch on the power by pressing the start key on the control panel.

2. Select a suitable driving profile with the PROFILE key (if the system is programmed for more than one driving profile).

3. Move the joystick carefully forwards to drive forwards or backwards to reverse.

4. The speed setting is adjusted using the keys for higher and lower speed. The wheelchair’s electronics allow very slow driving over edges. You can drive up to the edge and then carefully drive over it.
Joystick Error
If the joystick is moved from the central position before, during or immediately after the control system is switched on, the screen image for a shifted joystick will be displayed for 5 seconds. On control panels without a display, the LEDs on the battery voltage indicator will “wander” backwards and forwards instead. If the joystick is not released during this time, a joystick error will be registered and the wheelchair will not drive. To enable the wheelchair to drive again, ensure that the joystick is in the central position. Then switch the wheelchair off and on again.

Screen image: Shifted joystick

If R-Net detects an error in the wheelchair electronics which needs attention, a “Diagnostics screen” will appear on control panels with display. See example below. On control panels without display, the battery voltage indicator LEDs will flash rapidly instead. If this happens, you should get in touch with your service contact as soon as possible.

Screen: Diagnostics screen on monochrome display
Driving Technique
The control system electronics “interpret” the movements of the joystick and move the wheelchair as intended. For normal driving, the user doesn't need to employ any complex techniques, which is an advantage if the user is inexperienced. A good way of starting is quite simply to move the joystick in the direction you want to go. The wheelchair then moves in the direction in which the joystick is pointing. Always think about driving as flexibly as possible and avoid severe braking and avoidance maneuvers.

DRIVING FORWARD

TURNING LEFT

TURNING RIGHT

DRIVING BACKWARD

⚠️ CAUTION
Do not perform the first test drive on your own. The test drive is of course just a check of how you and the wheelchair function together, and you may need some assistance. Before driving, check that the wheel lock release lever is set in the drive position.

⚠️ WARNING
Do not use the joystick as the sole support for your hand or limb - wheelchair movements and bumps could upset your control.
Always bear in mind that a high speed and extended braking distance entail an increased risk of accidents.
In the event of the wheelchair moving in an unexpected way, RELEASE THE JOYSTICK! This action should stop the wheelchair under any circumstances. In the case of an emergency, if the wheelchair continues to move after releasing the joystick, turn the wheelchair off by pressing the On/Off button.
R-Net control panel

Locking/unlocking the wheelchair
The control system can be locked in two different ways. Either by using a key sequence on the keypad or with a physical key. The method used depends on how the system has been programmed.

Locking with the keypad:
- Press and hold down the on/off key while the control system is active.
- After 1 second, the control system emits a beep. Release the on/off key.
- Move the joystick forwards until the control system emits a beep.
- Move the joystick back until the control system emits a beep.
- Release the joystick. You will hear a long beep.
- The wheelchair is now locked.

Control panels with display will now show the following screen:

Unlocking:
- Press the on/off key if the control system is switched off. On control panels without display the LEDs on the speed indicator will “wander” backwards and forwards).
- Move the joystick forwards until the control system emits a beep.
- Move the joystick back until the control system emits a beep.
- Release the joystick. You will hear a long beep.
- The wheelchair is now unlocked.
R-Net control panel

Locking with a key
- Press the on/off key if the control system is switched off.
- Insert and remove the key from the charging contact on the control panel.
- The wheelchair is now locked.

Control panels with display will now show the following screen:

![Lock Screen]

Unlocking:
- Press the on/off key if the control system is switched off. On control panels without display the LEDs on the speed indicator will “wander” backwards and forwards).
- Insert and remove the key from the charging contact.
- The wheelchair is now unlocked.
Seat functions
(Not applicable to all seat models)

On some seats the electrical functions can be controlled with the help of the control panel joystick. Some models are equipped with three memory locations. Each memory location can store the position of the seat’s adjustment device. This means that it is easy to retrieve a seat position saved earlier.

Maneuvering the seat
1. Press the “Mode” button one or more times until an icon for seat function appears in the control panel display - see illustration.
2. Move the joystick to the left or right to select a seat function. The icon for the seat function selected appears in the display.
3. Move the joystick forwards or backwards to activate the function.

Below is an example of the icons that may be shown in the display. Which icons are shown varies depending on the seat model and available functions.

CAUTION
If the symbol “M” appears together with the seat icon, this means that a memory function has been activated. Move the joystick to the left or right to choose a seat function instead.

Move the joystick to the left or right to select a function. The icon for the function selected appears in the display.
Seat functions
(Not applicable to all seat models)

Return to drive mode
Press the “Mode” button one or more times until a standard display image with speed indicator appears in the control panel display - see illustration.
Seat functions
(Not applicable to all seat models)

The control system on some seats has three memory locations for seat positions. Each memory location can store the position of the seat’s adjustment device. This means that it is easy to retrieve a seat position saved earlier.

Retrieving position from memory
1. Press the “Mode” button one or more times until a seat icon appears in the control panel display.
2. Move the joystick to the left or right to select a memory location (M1, M2 or M3). A seat icon and memory symbol “M” for the memory location selected are shown in the control panel display - see illustration.
3. Move and hold the joystick forwards. The seat adjusts to the position stored earlier. For reasons of safety, the joystick must be held forwards until the seat is fully adjusted to the required position. Once the seat has adjusted to the saved position, it stops moving.

⚠️ CAUTION
Movement of the seat can be stopped at any time by releasing the joystick.

Return to drive mode
Press the “Mode” button one or more times until a standard display image with speed indicator appears in the control panel display - see illustration.
Seat functions
(Not applicable to all seat models)

Saving position to memory
1. Set the seat’s electrical functions to the desired mode.

2. If not activated, activate the seat/memory function by pressing the “Mode” button one or more times until a seat icon appears in the control panel display.

3. Move the joystick to the left or right to select a memory location (M1, M2 or M3). A seat icon and memory symbol “M” for the memory location selected are shown in the control panel display - see illustration.

4. Move the joystick backwards to activate the “save” function. An arrow will appear next to the memory symbol “M” - see illustration.

5. Save the current position by moving the joystick forwards and holding it in that position until the arrow next to the memory symbol “M” disappears.

Return to drive mode
Press the “Mode” button one or more times until a standard display image with speed indicator appears in the control panel display - see illustration on previous page.
Seat functions R-Net LED
(Not applicable to all seat models)

On certain seats the electrical functions for seat lift, seat angle, backrest angle and legrest angle are controlled with the control panel joystick. Other seat functions require a separate seat control panel.

Maneuvering the seat
1. Press the “Mode” button one or more times until the LED for a seat function lights up.
2. Move the joystick to the left or right to select a seat function. The LED for the selected seat function will light up.
3. Move the joystick forwards or backwards to activate the function.

Move the joystick to the left or right to select a function. The LED for the selected function will light up.
Seat functions R-Net LED
(Not applicable to all seat models)

Return to drive mode
Press the “Mode” button one or more times until a standard display image with speed indicator appears in the control panel display - see illustration.
Driving rules

Support wheels
The support wheels mounted at the rear minimize the risk of the wheelchair tipping over backwards when passing obstacles and the like, and they must always be mounted when the chair is being driven.

If your wheelchair is fitted with support wheels, they must always be fitted when you drive. There is a risk of tipping.

Always be aware that high speed and a longer braking distance mean a greater risk of accident.

Never drive fast/at full speed in narrow passages, on narrow pavements, etc. because an incorrect maneuver/steering error can lead to a risk of accident.

Remember that a surface that is closed at the side will affect the wheelchair and may make it steer sideways. Therefore, never drive at full speed on surfaces that are closed at the side.

Using the seat angle function shifts the center of gravity, which may have a negative effect on the driving properties. So never drive at full speed if the seat has been angled a long way.
**Driving over obstacles**
Do not drive the wheelchair over obstacles of a height greater than 2.5 in. Driving over tall edges increases the risk of tipping over as well as the risk of damage to the wheelchair.

Negotiating obstacles must always be done with great care.

---

**WARNING**

Do not drive the wheelchair over obstacles higher than 2.5 inches. You should always drive over obstacles with great caution.

---

**WARNING**

A raised seat lift/seat angle/back angle changes the center of gravity and increases the risk of tipping. Therefore, use these seat functions only on flat surfaces and always drive with great caution and at low speed.
Driving downhill
You should always drive downhill at low speed and with great caution.

Avoid braking suddenly and sudden evasive maneuvers and never drive so fast that you are unable to control the wheelchair safely without risks.

You should be extremely careful when driving downhill on an uneven surface (for example grass, gravel, sand, ice and snow).

---

**WARNING**

Do not drive downhill on a gradient greater than 10°.
Dynamic stability according to ISO 7176-2 = 6°.

---

**WARNING**

A raised seat lift/seat angle/back angle changes the center of gravity and increases the risk of tipping. Therefore, use these seat functions only on flat surfaces and always drive with great caution and at low speed.
Driving uphill
You should always drive uphill with great caution.

Avoid sudden evasive maneuvers and never drive so fast that you are unable to control the wheelchair safely without risks.

You should be extremely careful when driving uphill on an uneven surface (for example grass, gravel, sand, ice and snow).

\[\text{Max. slope 10°} \]

\[\text{Safe slope 6°} \]

\[\text{WARNING} \]
Do not drive uphill on a gradient greater than 10°. Dynamic stability according to ISO 7176-2 = 6°.

\[\text{WARNING} \]
A raised seat lift/seat angle/back angle changes the center of gravity and increases the risk of tipping. Therefore, use these seat functions only on flat surfaces and always drive with great caution and at low speed.
Driving with sideways slopes
Driving with a sideways slope must always be performed with great care.

Avoid abrupt avoidance maneuvers and never maintain a speed higher than that at which you can maneuver the wheelchair in a safe and secure manner.

When driving on sideways slopes with an uneven surface (for example grass, gravel, sand, ice or snow) a great deal of extra care must be observed.

⚠️ WARNING
Do not drive the wheelchair on side slopes steeper than 6 degrees. There is a risk of tipping.

⚠️ WARNING
A raised seat lift/seat angle/back angle changes the center of gravity and increases the risk of tipping. Therefore, use these seat functions only on flat surfaces and always drive with great caution and at low speed.
Releasing the manual wheel locks
The wheel locks can be released in order to make it possible to move the wheelchair manually.

1. Shut off the wheelchair using the Power Switch button on the control panel.
2. Move the wheel lock release lever to the right, see the picture. The chair can now be moved manually.

WARNING

Never use the wheelchair on a sloping surface with the brakes released.
Always ensure that the wheelchair is switched off when the brakes are activated/deactivated.
To prevent the wheelchair from rolling off, ensure that it is on a dry, level surface before releasing the brakes.
Anyone who pushes a wheelchair with the brakes released must ensure that this is done safely without risks.
Always reset the brake release after moving the wheelchair manually.
When the brakes are released, it should not be possible to drive the chair. If the chair can still be driven, contact your service contact or Permobil immediately.
Charging batteries

When should the batteries be charged?
How frequently you need to charge the batteries in your wheelchair depends on a number of factors, including how you use your wheelchair, the temperature and age of the batteries and how they are made. All batteries also gradually lose capacity as they age.

The most important factor for the life of the batteries is how much power is taken out of them before they are charged and how often they are charged/discharged.

To achieve the best life, the batteries should not be discharged completely. Always charge the batteries immediately after they have been discharged.

If the battery voltage indicator shows that the batteries appear to be losing power faster than normal, the batteries may be worn out and need to be replaced.

WARNING
Use only the charger supplied with your wheelchair or recommended by Permobil. Using other chargers may damage the batteries, the wheelchair electronics or the charger itself. It may also result in parts becoming overheated, which may entail a greater risk of fire.

Be careful when using metal objects when working with batteries. A short-circuit can easily cause an explosion. Always use safety gloves and safety goggles.

You may only use a charger with a maximum charging current of 10 A (average) (the effective value of the charging current must not exceed 12 A).

The batteries must be charged in a well-ventilated room, not in a wardrobe. The batteries must not be charged in a bathroom or wetroom.

If you want to interrupt the charging process, the mains voltage should be switched off before the charging contact is disconnected from the wheelchair’s charging socket. This is to avoid sparking and unnecessarily high wear on the charging contact.

The charger’s charging cable must not be extended.

The charger may get hot and must not be covered. The charger must be placed so that it has free space on all sides.

The charging contact must be replaced if it is damaged or gets hot during charging. Both the contact on the charger's cable and the wheelchair’s charging socket should be replaced if one part is damaged or worn. The contacts must be replaced by qualified personnel.
Charging

Ensure that the wheelchair is switched off with the On/Off key on the control panel and then connect the charging plug to the wheelchair’s charging socket. The battery voltage indicator on the wheelchair’s control panel lights up and shows the charging status during charging.

After charging has been completed, the wheelchair must be switched off and on again with the On/Off key on the control panel before it can be driven.

⚠️ CAUTION

CAREFULLY READ THE INSTRUCTIONS SUPPLIED WITH THE CHARGER BEFORE STARTING TO CHARGE THE WHEELCHAIR.

⚠️ CAUTION

Switch off the wheelchair with the On/Off key on the control panel before charging but ensure that the main fuse is in the ON position.

Ensure that the charging contact has been fully inserted in the wheelchair’s charging socket. The wheelchair cannot be driven when the charger is connected.

Charging socket location

Charging socket
Transport

The wheelchair must only be transported in a vehicle that is approved for such purposes.

Check that the wheelchair is properly fastened and that the wheel locks are engaged. The wheelchair can be locked into position by running fastening straps through the brackets in the front and the back. Also check that the fastening points on the transport vehicle are well-anchored.

⚠️ WARNING
A poorly fastened chair can cause extensive damage and injury both to the people in the transport vehicle as well as to the vehicle itself and the wheelchair if it comes loose.

Front fastening brackets

Rear fastening brackets
General advice for Air transport
When transporting your wheelchair by air, there are especially these three items you should consider:

1. Batteries
   Gel batteries: In most cases they don’t need to be taken out of the wheelchair. Just be sure of that the wheelchair’s main fuse is in OFF position.

   Acid batteries: Most airlines require that the batteries should be taken out of the wheelchair and that they must be transported in special boxes that the airline can provide.

2. Dimensions and weight of the wheelchair
   How much the wheelchair weighs, and how large it is, is of significance depending upon the type of aircraft by which the wheelchair is to be transported. The smaller the aircraft, the smaller the wheelchair can be/weigh and vice versa. Always check with the airline concerned for the rules that will apply.

3. Preventing damages
   During air transport, the wheelchair will be together with other goods in a cramped room, hence it is important that preventive measures be performed in order to minimize transport damages to the wheelchair.

   Cover up the control panel with a soft, shock-absorbing material (plastic foam or the like) and fold it in towards the backrest. Protect other protruding objects in the same manner. Tape any possible loosely hanging cabling firmly to the seat or the cover.

⚠️ WARNING
Certain airlines can refuse to take acid batteries onboard.

⚠️ WARNING
In order to ensure that the transport can take place in a safe manner and that no unpleasant surprises arise at the last minute, you should always contact the respective airlines before the transport.
Maintenance and Repairs

In order for your wheelchair to function well it is important that it is used in the correct manner and that regular maintenance is performed. A well-maintained wheelchair will have a longer lifespan and minimizes the risk that defects will arise.

Tool Kit
A tool kit comes with the wheelchair and contains the following that can be used for performing maintenance and easier repairs.

<table>
<thead>
<tr>
<th>TOOL</th>
<th>AREA OF USE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allen keys</td>
<td>General maintenance/seat adjustment</td>
</tr>
<tr>
<td>10-11, 12-13 mm spanners</td>
<td>General maintenance/replacing batteries</td>
</tr>
<tr>
<td>Seat lift crank</td>
<td>Manually raising the seat lift</td>
</tr>
<tr>
<td>2 Screwdrivers</td>
<td>General maintenance</td>
</tr>
</tbody>
</table>

⚠️ CAUTION

Certain repairs can require tools other than those that come with the wheelchair.

The main fuse must always be shut off when replacing batteries or fuses. Always shut off the power supply to the control panel before switching off the power with the main fuse.

⚠️ WARNING

All inappropriate modifications to the wheelchair and its different systems can cause an increased risk of accidents.

All changes and intrusive work on the wheelchair’s vital systems must be performed by an authorized serviceman. Always contact an authorized serviceman or Permobil when in doubt.
General batteries/Storage

- Note that a battery drains on its own and a discharged battery can freeze and burst when it is cold. If the wheelchair must be stored without being used for a longer period of time, the batteries should always be charged up once per month so that they do not incur any damage.

- The wheelchair must not be stored in a room where condensation arises (mist or dampness on the surfaces) e.g. laundry rooms or similar rooms.

- The wheelchair can be stored in an unheated room. What is best for the wheelchair from a corrosion standpoint is that the room be some degrees warmer than its surroundings, which keeps the room drier.

- If the wheelchair is equipped with acid batteries, the acid level should be checked regularly. If the wheelchair is equipped with GEL batteries, the fluid level need not be checked.

- The lifespan of the batteries depends entirely upon regular charging.

**Short-term storage**
In order for the charging procedure to give a battery with good capacity, the temperature in the storage room must not be lower than 41 F. Storage at under 41 F increases the risk of the battery not being fully charged when it is to be used as well as increasing the risk of corrosion.

**Long-term storage**
Storage can occur in an unheated room, however the battery should be maintenance-charged at least once per month.

---

**WARNING**

Observe care in the use of metallic objects when working with batteries. A short-circuit can easily cause an explosion. Always use safety gloves and protective eye-glasses.
Cleaning
Regular care and maintenance will prevent unnecessary wear and damage to your wheelchair. The following is general advice recommended by Permobil. For severe soiling of the upholstery or damage to the surface finish, contact Permobil for information.

Upholstery, cloth/vinyl
For normal cleaning, wash the upholstery with lukewarm water and a mild non-abrasive soap. Use a soft cloth or brush. Before the surface dries, wipe off any water/soap residues with a clean, dry cloth. This procedure may be repeated to remove stubborn dirt or stains.

If necessary, the cover may be removed before cleaning. See also the washing instructions on the upholstery materials.

Metal surfaces
For normal cleaning it is best to use a soft cloth/sponge, hot water and a mild detergent. Wipe down carefully with a cloth and water, and dry off.

Remove scuff marks from semi-matt surfaces with soft wax (follow manufacturer’s instructions).

Remove scuff marks and scratches from shiny surfaces using car polish, either liquid or paste. After polishing, apply soft car wax to restore the original surface gloss.

Plastics
For normal cleaning, wash plastic surfaces with a soft cloth, mild detergent and hot water. Rinse thoroughly and dry with a soft cloth. Do not use solvents or abrasive kitchen cleaners.

Control panel
Use a soft cloth moistened with mild detergent and be careful when cleaning the joystick and the panel’s display. Do not use solvents or abrasive kitchen cleaners. The panel must not be rinsed with water or any other liquid.

⚠️ WARNING
Never hose the wheelchair down as the electronics may be damaged. The wheelchair must always be turned off when being cleaned.
Wheel Lock Release
Check regularly, approx. once per month, the functionality of the wheel lock release. The wheelchair must not be possible to drive when the wheel locks are disengaged.

Location of the wheel lock release

Wheel lock release lever
Changing the batteries
Front battery

1. Place the wheelchair on a level surface.
2. Run/fold out the leg support and, if possible, raise the seat lift.
3. Shut off the main fuse.
4. Loosen the front chassis cover from both guide pins by pressing the covers both sides inwards and then lifting the cover upwards/forwards.
5. Loosen the battery terminals. Also see the sticker on the inside of the chassis cover.
6. Use a blunt screwdriver or the like to lift up the lower edge of the battery via the hole under the front edge of the battery cover (see picture).
7. Lift the battery out using the battery strap.
8. Insert the new battery using the battery strap. Let the strap remain on the battery.
9. Connect the battery terminals.
10. Remount the chassis cover.
11. Switch on the main fuse.
Rear battery

1. Place the wheelchair on a level surface.
2. If possible, raise the seat lift.
3. Shut off the main fuse.
4. Loosen the chassis casing’s rear part from the guide pins and lift it up a bit.
5. Open the battery hatch with the knob and lower the hatch to the rear.
6. Pull out the battery using the battery strap so that the battery connections become accessible.
7. Loosen the battery terminals. Also see the sticker on the inside of the battery hatch.
8. Lift the battery completely out.
9. Insert the new battery in using the battery strap. Let the strap remain on the battery.
10. Connect the battery terminals.
11. Lock the battery hatch.
12. Remount the chassis cover.
13. Switch on the main fuse.
Wheels
Check at regular intervals that the wheelchair’s tires have the prescribed tire pressure. An incorrect tire pressure can cause deterioration in stability and maneuverability, plus extremely low air pressure can give rise to abnormal wear as well as shorter driving distances. So check regularly to see that the tires are maintained at a pressure of 36 psi (250 kPa).

Filling with air
1. Unscrew the plastic caps on the air valves of the front and rear tires respectively.

2. Connect the compressed air nozzle to the air valve and adjust the tire pressure to the prescribed level.

Filling valve, rear tire
Socket head cap screws and filling valve, front tire
Replacement of rear tire inner tube
1. Put the wheelchair up on blocks so that the wheel is free and then let the air out of it.
2. Force the tire off the rim.
3. Replace the broken inner tube.
4. Put the tire back on the rim and fill with air.

Replacement of front tire inner tube
NOTE Applies only if your wheelchair is equipped with air-filled front tires.
1. Put the wheelchair up on blocks so that the wheel is free and then let the air out of it.
2. Part out the rim by unscrewing the five socket head cap screws that are holding the rim together.
3. Replace the broken inner tube.
4. Assemble the rim back together again with the tire, check that the inner-tube is not caught anywhere between the parts of the rim, and fill with air.

⚠️ WARNING
The recommended air pressure for front/rear tires is 36 psi (250 kPa). Overfilling causes a risk of explosion. Incorrect tire pressure can involve a deterioration of stability and maneuverability, so check regularly that the tire contains the prescribed air pressure.
Resetting of main fuse/battery cut-out

The main fuse also functions as a battery cut-out, but in the operating instructions it is generally called the main fuse.

Replacement of the main fuse is normally not necessary as it is of the automatic type that can be reset when it has been thrown. The resetting is done by placing the switch in the "ON" position.

⚠️ CAUTION

Always shut off the power supply on the control panel before switching off the power with the main fuse.

The main fuse is accessible via an outlet in the chassis cover, see picture below.

1. Check the decal to see what the ON and OFF positions are. Fold up the rubber protector and flip the switch towards the direction indicated by the sticker.

2. Fold the rubber protector back.

⚠️ WARNING

A thrown main fuse often involves larger electrical faults. The cause should be checked carefully before the switch is reset. Always contact an authorized serviceman or Permobil when in doubt.
Replacement of charging fuse
The fuse holder for the charging fuse is located under the wheel lock release lever on the front edge of the front chassis cover.

![Charging fuse location](image1)

**WARNING**
Always shut off the power supply on the control panel before changing the charging fuse. The battery charger must not be connected when the charging fuse is replaced.

![Charging fuse 15A](image2)

**WARNING**
A triggered charging fuse can indicate a problem or defects with batteries, charger, charger cables or the wheelchair’s charging outlet.
The cause of a triggered charging fuse should be carefully checked before the fuse is replaced.
The specifications given in the following pages are only applicable to the Street chassis with Corpus-seat.

For size and weight information about each seat, see the Owner’s Manual accompanying the seat.

Height: 45.875”
Length: 42.25”
Width: 24.75”

Smallest transportations size: Length 32.5” Width 24.75” Height 31.5”

# Troubleshooting guide

The following troubleshooting guide describes a number of faults and events which may occur when you use your wheelchair, together with suggested remedies. Note that this guide cannot describe all the problems and events which may occur and you should always contact your service contact or Permobil in case of doubt.

<table>
<thead>
<tr>
<th>EVENT</th>
<th>POSSIBLE CAUSE</th>
<th>REMEDY</th>

</tbody>
</table>
Diagnostics R-Net LCD
When an error or a fault occurs in the wheelchair’s electronics, information on it is displayed in the control panel’s display. This information can then be used to diagnose where the error/fault occurred and its cause.

Troubleshooting and repairs must always be performed by competent personnel with good knowledge of the wheelchair’s electronics. More information on troubleshooting and remedies can be found in the Service Manual for this wheelchair model.

Diagnostic screens
Current diagnostic screen
When the control system’s integrated protection circuits have been triggered so that the control system can no longer operate the wheelchair, a diagnostic screen is displayed in the control panel’s display.

This indicates a system fault, i.e. R-net has detected a problem somewhere in the wheelchair’s electrical system.

NB! If the fault is in a module that is not currently being used, it may still be possible to drive the wheelchair, but the diagnostic screen is displayed occasionally.

Switch off the wheelchair and leave it off for a few minutes. Then restart the wheelchair. If the fault persists, you must switch off the wheelchair and contact your service contact. Write down the information displayed in plain text in the control panel’s display and pass it on to your service contact.

Do not use the wheelchair until the problem has been remedied or you have received other instructions from your service contact.

⚠️ WARNING
Diagnostics should only be performed by persons with sound knowledge of the wheelchair’s electronic control system. Incorrect or poorly performed repair works may make it dangerous to use the wheelchair. Permobil accepts no liability for any personal injury or damage to the wheelchair and its surroundings that occurs on account of incorrect or poorly performed repair work.

⚠️ CAUTION
If any part is replaced without Permobil’s approval, the wheelchair’s warranty lapses. Permobil accepts no liability for any loss that occurs as a result of a component of the R-net control system being opened, adjusted or modified without permission.
Example of a screen showing a system fault

Identified module
This indicates the control system module that detected the problem.
PM= Power module
JSM= Joystick module

Error message
The error message provides a brief description of the error type.

Error code
The four-digit code indicates which protection circuit has been triggered.

Repair of defective units
Apart from specific OEM-approved spare parts (contact Permobil for further information on these), there are no replaceable parts in the R-net control system. Consequently, defective units must be sent to Permobil or a Permobil-approved repairer for repair.
Diagnostics R-Net LED
Battery voltage indicator
Each time the wheelchair is started up, parts of the wheelchair’s electronics are checked. If any fault has occurred in these parts, this is displayed on the control panel’s battery voltage indicator and the indicator for speed/driving profile in the form of one or more flashing lamps.

Troubleshooting and repairs must always be performed by competent personnel with good knowledge of the wheelchair’s electronics. More information on troubleshooting and remedies can be found in the Service Manual for this wheelchair model.

Permanently on
All in order. The number of lamps that light up depends on the voltage remaining in the batteries. If the batteries are fully charged, all the lamps light up.

Slowly flashing red lamps, 1 - 2
The batteries need recharging immediately.

Rapid flashes, 1 - 10 lamps
A fault has been detected in the wheelchair’s electronics and the wheelchair cannot be driven.
• Switch off the wheelchair.
• Check that all visible cables and the cable to the control panel are connected correctly.

Switch the wheelchair on again. If the fault persists, count the number of flashing lamps and check for a possible cause and remedy in the table on the adjoining page.

Do not use the wheelchair until the problem has been remedied or you have received other instructions from your service contact.

⚠️ WARNING

Diagnostics should only be performed by persons with sound knowledge of the wheelchair’s electronic control system. Incorrect or poorly performed repair work may make it dangerous to use the wheelchair. Permobil accepts no liability for any personal injury or damage to the wheelchair and its surroundings that may occur on account of incorrect or poorly performed repair work.

⚠️ CAUTION

Any error signals on the indicators are not displayed while the wheelchair is being driven. They appear when it is next started.

Accessories
We are constantly developing accessories for our wheelchairs. Contact your nearest Permobil retailer for more information about the accessories available for your wheelchair.
CAUTION! It is very important that you read this information regarding the possible effects of electromagnetic interference on your powered wheelchair.

Electromagnetic Interference (EMI) From Radio Wave Sources

Powered wheelchairs and motorized scooters (in this text, both will be referred to as powered wheelchairs) may be susceptible to electromagnetic interference (EMI), which is interfering electromagnetic energy (EM) emitted from sources such as radio stations, TV stations, amateur radio (HAM) transmitters, twoway radios, and cellular phones.

The interference (from radio wave sources) can cause the powered wheelchair to release its parking brakes, move by itself, or move in unintended directions. It can also permanently damage the powered wheelchair’s control system. The intensity of the interfering EM energy can be measured in volts per meter (V/m). Each powered wheelchair can resist EMI up to a certain intensity. This is called its "immunity level". The higher the immunity level, the greater the protection.

The immunity level of this powered wheelchair model as shipped, with no further modification, is 20V/m in the range of 26 MHz to 1000 MHz.

There are a number of sources of relatively intense electromagnetic fields in the everyday environment. Some of these sources are obvious and easy to avoid. Others are not apparent and exposure is unavoidable. However, we believe that by following the warnings listed below, your risk to EMI will be minimized.

The sources of radiated EMI can be broadly classified into three types:

1. **HAND-HELD PORTABLE TRANSCEIVERS** (transmitters-receivers) with the antenna mounted directly on the transmitting unit. Examples includes: citizens band (CB) radios, "walkie talkie", security, fire, and police transceivers, cellular telephones, and other personal communication devices.

   **NOTE!** Some cellular telephones and similar devices transmit signals while they are ON, even when not being used.

2. **MEDIUM-RANGE MOBILE TRANSCEIVERS** such as those used in police cars, fire trucks, ambulances, and taxis. These usually have the antenna mounted on the outside of the vehicle.

3. **LONG-RANGE TRANSMITTERS AND TRANSCEIVERS** such as commercial broadcast transmitter (radio and TV broadcast antenna tower) and amateur (HAM) radios.
NOTE! Other types of hand-held devices, such as cordless phones, laptop computers, AM/FM radios, TV sets, CD players, and cassette players, and small appliances, such as electric shavers and hair dryers, so far we know, are not likely to cause EMI problems to your powered wheelchair.

Because EM energy rapidly becomes more intense as one moves closer to the transmitting antenna (source), the EM fields from hand-held radio wave sources (transceivers) are of special concern. It is possible to unintentionally bring high levels of EM energy very close to the powered wheelchair’s control system while using these devices. This can affect powered wheelchair movement and braking. Therefore, the warnings listed below are recommended to prevent possible interference with the control system of the powered wheelchair.

WARNINGS

Electromagnetic interference (EMI) from sources such as radio and TV stations, amateur radio (HAM) transmitters, two-way radios, and cellular phones can affect powered wheelchairs and motorized scooters. Following the warnings listed below should reduced the chance of unintended wheel lock release or powered wheelchair movement which could result in serious injury.

- Do not operate hand-held transceivers (transmitters/receivers), such as citizens band (CB) radios, or turn ON personal communications devices, such as cellular phones, while the powered wheelchair is turned ON.
- Be aware of nearby transmitters, such as radio or TV stations, and try to avoid coming close to them.
- If unintended movement or wheel lock release occurs, turn the powered wheelchair OFF as soon as it is safe.
- Be aware that adding accessories or components, or modifying the powered wheelchair, may make it more susceptible to EMI.
  NOTE! There is no easy way to evaluate their effect on the overall immunity of the powered wheelchair).
- Report all incidents of unintended movement or wheel lock release to the powered wheelchair manufacturer, and note whether there is a radio wave source near by.
